	APPENDIX F: TRENDS MEASURED	A16
	APPENDIX G: SURVEY QUESTIONNAIRE	A17

Foreword

Welcome to the Renfrewshire 2017/18 Adult Health and Wellbeing Survey. This survey report provides information on people's health behaviours and perceptions of their health and wellbeing. It also covers their views on the local environment including experiences of crime, feelings of safety and the quality of local services, as well as feelings of trust, local friendships, volunteering and social activism.

As this is the fourth Adult Survey carried out in Renfrewshire, we can compare some of the results with previous surveys carried out in 2008, 2011 and 2014. We hope you find the report useful in providing an overview of the many factors which contribute to people's perceptions of their health and wellbeing. Our thanks go to the 600 participants who took part in Renfrewshire's Health and Wellbeing Survey.

Some results show real improvement over the ten year period from 2008 to 2018:

- Percentage of people smoking has reduced from 35.2% in 2008 to 15% in 2018
- Percentage of people exposed to second hand smoke has reduced from 43% in 2008 to 28% in 2018
- People's self perception of their health being good or very good has increased from 67.2% to 80%
- People having a positive perception of their quality of life increased from 84.9% to 91%
- Percentage of people that felt valued as members of the community increased from 60.5% to 74%

However, the survey also shows that only 47% of people in Renfrewshire met the physical activity target to be active for at least 150 minutes per week. This is lower than the Greater Glasgow and Clyde average of 58%.

The survey results also show that those living in the most deprived 15% datazone areas (19.8% of the survey sample) had considerably less positive responses throughout the survey:

- Those with limiting conditions/illnesses: 32% in the most deprived areas against an average of 20%
- Smoking in deprived areas 28% against a 15% average
- Those receiving all income from state benefits: 20% in the most deprived areas against an average of 8%

- Those that have difficulty meeting necessary bills and living expenses:
38% in the most deprived areas against an average of 28%

Renfrewshire Health and Social Care Partnership will use the survey results to improve services and focus specifically on reducing inequalities. We work to achieve our vision that Renfrewshire is a caring place where people are treated as individuals and are supported to live well.

Should you want to get in touch regarding the survey, please contact:
Renfrewshire Health and Social Care Partnership Tel: 0141 618 7629; Email:
Renfrewshire.HSCP@ggc.scot.nhs.uk

1 Introduction

1.1 Introduction¹

This report contains the findings of a research survey on the health and wellbeing (HWB) of NHS Greater Glasgow and Clyde (NHSGGC) residents carried out in 2017/18. The fieldwork and data entry were performed by BMG on behalf of NHSGGC, and the analysis and reporting were performed by Traci Leven Research.

The survey has been conducted every three years since 1999 and is the seventh in the series of studies; initially covering the NHS Greater Glasgow area it was expanded in 2008 to cover the new NHSGGC area. This survey therefore represents the third follow-up of the expanded study.

Background

The original aims of the survey were:

- to provide intelligence to inform the public health approaches
- to explore the different experiences of health and wellbeing in our most deprived communities² compared to other areas
- to provide information that would be useful for monitoring health promotion interventions.

There have been many policy changes since the first HWB survey was conducted in 1999. For example, the dissolution of social inclusion partnership areas (SIPs) as a focus of tackling area based deprivation and the emergence of the Scottish Index of Multiple Deprivation (SIMD) as the main tool for measuring area based deprivation and focusing of resources; the emergence of Health and Social Care Partnerships (HSCPs) as a vehicle for integrated planning and delivery of health and social care services at a local level; and the introduction of Local Outcome Improvement Plans have led to a recognition of the breadth of influencing factors on health, for example alcohol use; nutrition; physical activity; poverty; isolation and loneliness.

The HWB survey is formed around a set of core questions which have remained the same since 1999. Prior to the 2017/18 survey an extensive consultation exercise took place to modernise the questionnaire. Questions

¹ This section has been prepared by NHSGGC

² In 1999, our most deprived communities were given additional resources with the aim of reducing the gap between deprived and least deprived areas. The initiative was part of an umbrella programme of support which focused on Social Inclusion Partnership areas.

were included which will provide the potential for record linkage with other health records. New questions were included on food poverty³, loneliness, effect of benefit changes and the alcohol section was revised. The 2017/18 survey provides an opportunity to explore trends over time while also exploring some contemporary public health issues.

The survey continues to offer flexible solutions for monitoring the health of the population in a range of geographies within NHSGGC. Again in 2017/18 we conducted neighbourhood level boosts. Intensive interviewing took place in Govanhill; Ruchill/Possilpark; Greater Gorbals; Parkhead/Dalmarnock and Garthamlock/Ruchazie (to provide intelligence for monitoring the Thriving Places Programme). Boosts which enable the exploration of our most deprived areas compared to least deprived areas have taken place in Inverclyde and East Dunbartonshire. Renfrewshire was boosted to enable an exploration of their area as a whole.

Thanks are due to the working group that led the survey:

Allan A Boyd	Senior Public Health Analyst
Margaret McGranachan	Public Health Researcher

For further information, please contact:

allan.boyd@ggc.scot.nhs.uk
margaret.mcgranachan@ggc.scot.nhs.uk

We would also like to thank our partners for their feedback and comments during the questionnaire consultation and in particular to Catherine Bromley, Public Health Information Manager, Public Health Observatory, NHS Health Scotland for her advice on the survey methodology and questionnaire design.

Objectives

The objectives of the survey are:

- to examine trends in key indicators since 2008
- to monitor and compare changes amongst those living in the most deprived areas with other areas
- to provide health and wellbeing information at HSCP level and determine change over time

³ The Food Insecurity Experience Scale – see <http://www.fao.org/in-action/voices-of-the-hungry/fies/en/>

- to explore the health and wellbeing of the five neighbourhoods in Glasgow City.

Summary of Methodology

In total, 7,834 face-to-face in-home interviews were conducted with adults (aged 16 or over) in the NHSGGC area. Of these, 600 interviews were conducted in Renfrewshire. The fieldwork was conducted between August 2017 and January 2018. A full account of the sampling procedures, fieldwork and survey response can be found in Appendix A. The sample profile is in Appendix B. The survey questionnaire is in Appendix G.

1.2 This Report

This report presents the findings relating to Renfrewshire. Chapters 2-7 report on all the survey findings, with each subject chapter containing its own infographic summary at the start, and a 'key messages' summary at the end. For each indicator, comparisons are made with the NHSGGC area as a whole and figures and/or tables are presented showing the proportion of the sample which met the criteria, broken down by demographic (independent) variables. **Only comparisons with NHSGGC as a whole and findings by independent variables which were found to be significantly different ($p < 0.05$) are reported.** The independent variables which were tested were:

- Age Group
- Gender
- Age and gender
- Most deprived 15% datazones versus other areas

An explanation of how the independent variables were derived is in Appendix D.

Findings are all based on weighted data, ensuring that the sample was representative of the geography, population profile and deprivation groups of Renfrewshire as a whole. An explanation of the weighting process is in Appendix C.

Trends are reported for key indicators where a significant ($p < 0.01$) change has occurred since the 2014/15 survey. Trend data show key indicators since the 2008 NHSGGC health and wellbeing survey. The trends explored are listed in Appendix F.

A Note on Rounding and Interpreting Percentages

Due to rounding, not all questions recoded into positive or negative type responses will necessarily appear to add up to the quoted overall figure. For example, in Chapter 4 the overall proportion who agreed that they feel valued as a member of their community is 74%, comprising 13% who strongly agreed and 60% who agreed. The two categories appear to total 73%, but this is due to rounding. In fact, 13.4% strongly agreed and 60.3% agreed, giving a total of 73.7% overall who agreed.

Columns and bars presented in charts are built with statistics to one decimal place, but the figures on the charts are usually rounded to the nearest whole number.

Most percentages are presented to the nearest whole number. However, there are some instances where a small proportion gave a particular response and it is helpful to examine statistics to one decimal place.

Some questions, for example Q36 which relates to experience of crime (reported in Table 4.1), allow the respondent to select more than one category, so total responses can add up to more than 100%.

Other Surveys Cited in This Report

For context and comparison, findings from other surveys are cited in this report. These are:

- The Scottish Health Survey⁴

- The Scottish Household Survey
<https://www.gov.scot/Topics/Statistics/16002>
- The Scottish Crime and Justice Survey
<https://www.gov.scot/Topics/Statistics/Browse/Crime-Justice/crime-and-justice-survey>
- Previous NHS Greater Glasgow & Clyde Health and Wellbeing Surveys
<http://www.nhsggc.org.uk/your-health/public-health/research-and-evaluation/reports-library/>

⁴ 2017 data for some indicators from the Scottish Health Survey were not published when this report was prepared, and in these cases 2016 data are referenced instead.

HEALTH AND ILLNESS

VIEWS OF HEALTH

Proportion with a positive view of:

FEELING IN CONTROL

TREATMENT

LIMITING CONDITIONS/ILLNESSES

2.1 Self-Perceived Health and Wellbeing

General Health

Respondents were asked to describe their general health over the last year on a five point scale (very good, good, fair, bad or very bad). Overall, four in five (80%) gave a positive view of their health, with 23% saying their health was very good and 57% saying their health was good. However, 20% gave a negative view of their health, with 13% saying their health was fair, 7% saying it was bad and 1% saying it was very bad.

Comparison with NHSGGC

Those in Renfrewshire were more likely to have a positive view of their general health (80% Renfrewshire; 75% NHSGGC).

As Figure 2.1 shows, those aged under 35 were the most likely to have a positive view of their general health and those aged 65 and over were the least likely.

Figure 2.1: Positive View of General Health by Age and Deprivation

Those in the most deprived areas were less likely to have a positive view of their general health.

- The findings for Renfrewshire are more favourable than the national findings of the **Scottish Health Survey** (2017) which found that overall 73% of adults had a positive view of their general health, declining with age from 86% of 16-24 year olds to 53% of those aged 75+.

- **Scottish Health Survey** findings have shown a fairly consistent proportion of adults with a positive view of their general health (e.g. 75% in 2008, 74% in 2011, 74% in 2014, 73% in 2016, 73% in 2017). NHSGGC health and wellbeing surveys showed an increase in Renfrewshire between 2008 and 2011 (from 67% to 80%), but have shown little change since then.

Physical Wellbeing and Mental/Emotional Wellbeing

Respondents were presented with a 7-point ‘faces’ scale, with the expressions on the faces ranging from very happy to very unhappy:

Using this scale, they were asked to rate their general physical wellbeing and general mental or emotional wellbeing. Those selecting any of the three ‘smiling’ faces (1-3) were categorised as having a positive perception.

In total, 86% gave a positive view of their physical wellbeing, and 89% gave a positive view of their mental/emotional wellbeing. Both findings were consistent with those in 2014/15.

Comparison with NHSGGC

Those in Renfrewshire were more likely to have a positive view of their physical wellbeing (86% Renfrewshire; 81% NHSGGC) or mental/emotional wellbeing (89% Renfrewshire; 86% NHSGGC).

As Figure 2.2 shows, those aged under 35 were the most likely to have a positive view of their physical wellbeing.

Figure 2.2: Positive Perception of Physical Wellbeing by Age

Those in the most deprived areas were less likely to have a positive perception of their physical wellbeing or their mental/emotional wellbeing.

Table 2.1: Positive Perception of Physical Wellbeing and Mental and Emotional Wellbeing by Deprivation

	Positive Perception of Physical Wellbeing	Positive Perception of Mental and Emotional Wellbeing
Bottom 15%	77%	81%
Other areas	88%	91%
Overall	86%	89%

Feeling in Control of Decisions Affecting Life

Respondents were asked whether they feel in control of decisions that affect their life, such as planning their budget, moving house or changing job. Three in four (75%) said that they 'definitely' felt in control of these decisions, while 18% said that they felt in control 'to some extent' and 7% did not feel in control of these decisions.

Those in the most deprived areas were less likely to feel in control of the decisions affecting their life (62% most deprived; 78% other areas).

Trends – Feeling in Control

Between 2014/15 and 2017/18 there was an increase in the proportion who definitely felt in control of the decisions affecting their life, as Figure 2.3 shows.

Figure 2.3: Trends for 'Definitely' Feel in Control of Decisions Affecting Life – 2008 to 2017/18

2.2 Self Perceived Quality of Life

Using the 'faces' scale, respondents were asked to rate their overall quality of life. Nine in ten (91%) gave a positive view. This was consistent with the finding in 2014/15.

Comparison with NHSGGC

Those in Renfrewshire were more likely to have a positive perception of their quality of life (91% Renfrewshire; 88% NHSGGC).

Those aged under 35 were the most likely to have a positive perception of their quality of life. Those in the most deprived areas were less likely to have a positive perception of their overall quality of life.

Figure 2.4: Positive Perception of Quality of Life by Age and Deprivation

Among those aged 65 and over, women were more likely than men to have a positive view of their quality of life, as Table 2.2 shows.

Table 2.2: Positive Perception of Quality of Life by Age and Gender

	Positive Perception of Quality of Life
Men 16-44	97%
Women 16-44	95%
Men 45-64	87%
Women 45-64	86%
Men 65+	82%
Women 65+	97%

2.3 Long Term Conditions or Illness

One in five (20%) said they had a long-term condition or illness that substantially interfered with their day to day activities. Of these:

- 61% had a physical disability
- 18% had a mental or emotional health problem

- 63% had a long-term illness.

Comparison with NHSGGC

Those in Renfrewshire were less likely to have a limiting condition/illness (20% Renfrewshire; 25% NHSGGC).

Those aged 65 and over were the most likely to have a limiting condition or illness.

Those in the most deprived areas were twice as likely than those in other areas to have a limiting long-term condition or illness.

Figure 2.5: Limiting Long-Term Condition or Illness by Age and Deprivation

Among those aged 45-64, women were more likely than men to have a limiting condition or illness, as Table 2.3 shows.

Table 2.3: Limiting Long-Term Condition or Illness by Age and Gender

	Limiting Long-Term Condition or Illness
Men 16-44	11%
Women 16-44	12%
Men 45-64	15%
Women 45-64	27%
Men 65+	33%
Women 65+	32%

- The proportion in Renfrewshire who reported having a limiting long-term condition/illness was lower than the national figure from the **Scottish Health Survey (2017)** which found that overall 32% had a limiting condition/illness.
- **Scottish Health Survey** findings have shown a rise in the proportion with a limiting condition/illness from 26% in 2008 to 32% in 2012, but have shown little change since then. This contrasts with the NHSGGC survey findings for Renfrewshire where the rate of 20% in 2017/18 was the same as that in 2008.

Illnesses/Conditions for Which Treatment is Being Received

Just over one in three (35%) said they had one or more illness or condition for which they were currently being treated (not necessarily 'limiting' illnesses/conditions).

The proportion being treated for any conditions/illnesses ranged from 17% of those aged 16-34 to 62% of those aged 65 and over.

Those in the most deprived areas were more likely to be receiving treatment for at least one condition.

Figure 2.6: Proportion Receiving Treatment for at Least One Condition by Age and Deprivation

2.4 Summary of Key Messages from This Chapter

Comparisons with NHSGGC

Those in Renfrewshire were:

- more likely to have a positive view of their general health
- more likely to have a positive view of their physical wellbeing or mental/emotional wellbeing
- more likely to have a positive view of their quality of life
- less likely to have a long-term limiting condition or illness.

Differences by Age

- Those in the oldest age group were the least likely to have positive views of their general health or physical wellbeing.
- Those in the oldest age group were the most likely to have a limiting condition or illness or to be receiving treatment for at least one condition.

Differences by Deprivation

Those in the most deprived areas were:

- less likely to have positive views of their general health, physical or mental/emotional wellbeing or quality of life
- less likely to feel in control of the decisions affecting their life
- more likely to have a limiting condition or illness or to be receiving treatment for at least one condition.

Trends

- Between 2014/15 and 2017/18 there was no significant change in the proportion who had positive views of their general health, physical or mental/emotional wellbeing or quality of life. There was no significant change in the proportion with a limiting condition or illness.
- There was an increase between 2014/15 and 2017/18 in the proportion who definitely felt in control of the decisions affecting their life.

HEALTH BEHAVIOURS

SMOKING

15%
were smokers

Most deprived areas: **28%**

Other areas: **12%**

28%

Exposed to second-hand smoke most/some of the time

Most Deprived **41%**

Other Areas **25%**

NHSGGC **20%**

ALCOHOL

9%

AUDIT score indicating alcohol-related risk

Men **13%**

Women **6%**

NHSGGC **15%**

39%

agreed getting drunk is acceptable

NHSGGC **30%**

DIET

46%

5+ portions of fruit/veg per day

NHSGGC **41%**

Men **39%**

Women **52%**

Most deprived **34%**

Other areas **49%**

PHYSICAL ACTIVITY

47%

active for 150 minutes per week

NHSGGC **58%**

3.1 Smoking

Smoking

In total, 15% were smokers, smoking either every day (13%) or some days (3%).

Figure 3.1: Current Smoking Status

Comparison with NHSGGC

Those in Renfrewshire were less likely to be smokers (15% Renfrewshire; 20% NHSGGC).

Those aged 65 and over were the least likely to be smokers. Those in the most deprived areas were more than twice as likely than those in other areas to be smokers.

Figure 3.2: Proportion of Current Smokers by Age and Deprivation

Exposure to Second Hand Smoke

Respondents were asked how often they were in places where there is smoke from other people smoking tobacco. In total, 28% said that this happened most of the time (9%) or some of the time (20%). A further 33% said that they were seldom exposed to second hand smoke and 38% said they were never exposed.

Those aged 65 and over were the least likely to be exposed to second hand smoke.

Those in the most deprived areas were much more likely to be exposed to second hand smoke.

Figure 3.3: Exposure to Second Hand Smoke by Age and Deprivation

Respondents were also asked whether they were exposed to other people’s smoke in any of a number of places. Responses are shown in Figure 3.4 for non-smokers. Overall, 56% of non-smokers were exposed to smoke in at least one of these places. The most common was outside buildings (41%).

Figure 3.4: Proportion of Non-Smokers Exposed to Second Hand Smoke in Specific Places

In total, 12% of non-smokers were exposed to cigarette smoke in their own or someone else’s home.

Non-smokers aged 65 and over were the least likely to say they were exposed to cigarette smoke in their own or someone else’s home.

Figure 3.5: Proportion of Non-Smokers Exposed to Second Hand Smoke in Their Own or Someone Else’s Home by Age and Deprivation

Non-smokers in the most deprived areas were nearly twice as likely as those in other areas to be exposed to cigarette smoke in their own or someone else’s home.

Policy Context

- Legislation and policy in Scotland had sought to decrease smoking and exposure to second hand smoke over the last 12 years.
- In 2006, the Smoking Health and Social Care (Scotland) Act was introduced which banned smoking in enclosed public spaces.
<https://www.legislation.gov.uk/asp/2005/13/contents>
- In 2007, the minimum age for the sale or purchase of tobacco was raised from 16 to 18.
- In 2013, the Scottish Government published its strategy on tobacco *Creating a Tobacco-Free Generation: A Tobacco Control Strategy for Scotland*. This set a target to reduce smoking rates to 5% or less among the adult population by 2034.
<https://www.gov.scot/resource/0041/00417331.pdf>
- The Health (Tobacco, Nicotine etc. and Care) (Scotland) Bill was passed in 2016 which made provisions for the sale and purchase of Nicotine Vapour Products and introduced smoke-free perimeters around NHS hospitals.
<http://www.parliament.scot/parliamentarybusiness/Bills/89934.aspx>
- At the end of 2016, a ban on smoking in cars carrying anyone aged under 18 was introduced
- A new 5-year action plan was produced in June 2018, *Raising Scotland's Tobacco Free Generation*.
<https://beta.gov.scot/publications/raising-scotlands-tobacco-free-generation-tobacco-control-action-plan-2018/>

Evidence from Other Sources

- **The 2017 Scottish Health Survey** showed that 18% of adults in Scotland were current smokers (20% of men and 16% of women). Scottish Health Survey data showed a reduction in smoking rates from 28% in 2003 to 21% in 2013. The rate remained fairly consistent between 2013 and 2016, but there was a further reduction between 2016 and 2017. The Scottish Health survey found the proportion of non-smokers exposed to second-hand smoke in their own or others' homes was 12% in 2016, which was the same as in Renfrewshire in 2017/18.
- The findings from Renfrewshire have shown a continual reduction in smoking since 2008, when the rate was 35%.

Trends – Smoking

Although there was no significant change between 2014/15 and 2017/18, the rate of smoking in 2017/18 of 15% is significantly less than 2011, and more than half the rate of 2008 .

Figure 3.6: Trends for Smoking – 2008 to 2017/18

E-Cigarettes

One in 12 (8%) had used e-cigarettes in the last year at least some days. These comprised 5% who had used e-cigarettes every day in the last year and 3% who had done so on some days. A further 1% had used e-cigarettes just once or twice in the last year, and 91% had not done so at all.

- Women were more likely than men to have used e-cigarettes in the last year (10% female; 5% male).
- Those in the most deprived areas were more likely to have used e-cigarettes in the last year (13% most deprived; 6% other areas).

- **The Scottish Health Survey** in 2017 found that 7% of adults were currently using e-cigarettes. This was similar to the proportion in Renfrewshire in the 2017/18 NHSGGC survey who said they used e-cigarettes on every or some days in the last year.

3.2 Alcohol

AUDIT Scores

The health and wellbeing survey in 2017/18 used a new series of 10 questions which comprise the Alcohol Use Disorders Identification Test (AUDIT). The AUDIT scoring is shown in Appendix E. Together, responses to these questions allowed scores to be calculated for each respondent and categorised according to a level of risk. The proportion which fell into each category is shown in Table 3.1.

Table 3.1: Proportion in each Alcohol Use Disorders Identification Test (AUDIT) Category

	%
Low Risk (AUDIT score 0-7)	91%
Increasing Risk (AUDIT score 8-15)	8%
Higher Risk (AUDIT score 16-19)	1%
Possible Dependence (AUDIT score 20+)	<1%

Those with a score greater than 7 indicates increased risk (9%).

Comparison with NHSGGC

Those in Renfrewshire were less likely to have an AUDIT score which indicated risk (9% Renfrewshire; 15% NHSGGC).

Men were much more likely than women to have an AUDIT score which indicated risk (13% male; 6% female).

Frequency of Drinking

Respondents were asked how often they drank alcohol. Just under half (48%) said they never drank alcohol. One in ten (10%) drank alcohol at least twice per week.

Figure 3.7: How Often Drank Alcohol

Comparison with NHSGGC

Those in Renfrewshire were less likely to drink alcohol (52% Renfrewshire; 65% NHSGGC).

Binge Drinking

Those who drank alcohol were asked how often they had 6 or more units if female, or 8 or more if male on a single occasion in the last year. In total, 47% of drinkers had drunk alcohol at this level in the last year – 1% had done so daily/almost daily, 12% weekly, 12% monthly, and 22% less than monthly.

Comparison with NHSGGC

Among those who drank alcohol, those in Renfrewshire were less likely to binge drink (47% Renfrewshire; 58% NHSGGC).

Drinkers aged under 35 were the most likely to have binged in the last year and those aged 65 and over were the least likely.

Drinkers in the most deprived areas were more likely to have binged.

Figure 3.8: Proportion of Alcohol Drinkers who had Exceeded 6+ Units (if female) or 8+ units (if male) on a Single Occasion in the Last Year by Age and Deprivation

Questions about alcohol consumption differed to previous NHSGGC health and wellbeing surveys, so it is not possible to examine trends.

Policy Context

- The Scottish Government published *Changing Scotland's Relationship with Alcohol: a Framework for Action* in 2009 which set out measures to reduce alcohol consumption, support families and communities, promote positive attitudes and positive choices and improve treatment and support.
<https://www.gov.scot/Publications/2009/03/04144703/0>
- Initiatives introduced since the framework was implemented include the delivery of alcohol brief interventions and the establishment of Alcohol and Drug Partnerships
- Legislation implemented has included the quantity discount ban and the introduction of a lower drink-drive limit.
- Alcohol Minimum pricing legislation was introduced in 2018 (after the NHSGGC health and wellbeing survey fieldwork concluded)
<http://www.legislation.gov.uk/asp/2012/4/contents/enacted>
- In November 2018, The Scottish Government published *Rights, Respect and Recovery – Scotland's strategy to improve health by preventing and reducing alcohol and drug use, harm and related deaths*
<https://www.gov.scot/publications/rights-respect-recovery/>

Evidence from Other Sources

- **The 2017 Scottish Health Survey** showed AUDIT classifications of adults as 83% at low risk, 16% at increasing risk, 1% at higher risk and 1% with possible dependency.
- Findings for Renfrewshire in 2017/18 show a much higher proportion who say they do not drink alcohol (48%) than the national proportion from the **Scottish Health Survey** (2017) which was 17%.

Drinking Before a Night Out

Among those who said they drank alcohol, 32% said they drank alcohol (either alone or with others) before going on a night out.

Comparison with NHSGGC

Among those who drank alcohol, those in Renfrewshire were less likely to drink alcohol before a night out (32% Renfrewshire; 40% NHSGGC).

Among those who drank alcohol, those aged under 35 were the most likely to drink before a night out, and those aged 65 and over were the least likely, as shown in Figure 3.9.

Figure 3.9: Proportion who Drink Alcohol Before Going on a Night Out (Based on all those who drank alcohol) by Age

Among those who drank before going on a night out, the reasons given were:

- It provides a chance to socialise with friends and family (56%)
- It makes the night better (45%)
- It makes the night cheaper (26%).

Attitudes to Alcohol

Respondents were asked the extent to which they agreed or disagreed with the statement 'getting drunk is a perfectly acceptable thing to do'. Two in five (39%) agreed with this (37% agreed and 2% strongly agreed), while 22% neither agreed nor disagreed and 39% disagreed/strongly disagreed (24% disagreed and 15% strongly disagreed).

Comparison with NHSGGC

Those in Renfrewshire were more likely to agree that getting drunk was a perfectly acceptable thing to do (39% Renfrewshire; 30% NHSGGC).

Those aged under 35 were the most likely to agree that it was acceptable to get drunk and those aged 65 and over were the least likely.

Figure 3.10: Proportion who Agreed that Getting Drunk is a Perfectly Acceptable thing to Do by Age

Respondents were also asked the extent to which they agreed with the statement 'It is easier to enjoy a social event if you've had a drink of alcohol'. In total, 37% agreed with this statement (1% strongly agreed and 36% agreed), 21% neither agreed nor disagreed, and 41% disagreed (10% strongly disagreed and 31% disagreed).

Those aged 65 and over were the least likely to agree that it was easier to enjoy a social event if you've had a drink of alcohol. Men were much more likely than women to agree with this.

Figure 3.11: Proportion who Agreed that It is Easier to Enjoy a Social Event if You've Had a Drink of Alcohol by Age and Gender

Respondents were asked the extent to which they agreed that it was perfectly acceptable to drink on three types of public transport journeys. In total, 15% agreed it was acceptable to drink on intercity train services, 8% agreed it was acceptable to drink on local train services and 3% agreed it was acceptable to drink on a bus.

Comparison with NHSGGC

Those in Renfrewshire were less likely to agree it was acceptable to drink on:

- intercity train services (15% Vs 22%)
- local train services (8% Vs 11%)
- bus (3% Vs 5%).

Those aged under 35 were the most likely to agree it was acceptable to drink on intercity trains (21%) or local train services (12%).

Men were more likely than women to agree it was acceptable to drink on intercity trains (18% male; 13% female) or local train services (10% male; 6% female).

Places Selling Alcohol

Three in four (75%) felt that there was the right amount off-licences, local grocers and supermarkets selling alcohol in their local area, while 18% felt there were too many and 7% felt there were too few.

When considering the number of pubs, bars and restaurants selling alcohol in their local area, 75% felt there was the right amount, 13% felt there was too many and 12% felt there was too few.

Men were more likely than women to say there were too many shops selling alcohol (22% male; 14% female).

Those in the most deprived areas were more likely to feel there were too many:

- shops selling alcohol in their local area (30% most deprived; 15% other areas)
- pubs, bars and restaurants selling alcohol in their local area (25% most deprived; 10% other areas).

3.3 Diet

Fruit and Vegetables

The national target for fruit and vegetable consumption is to have at least five portions of fruit and/or vegetables per day. Respondents were asked how many portions of fruit and how many portions of vegetables they had consumed on the previous day. Just under half (46%) met the target of five portions. One in thirteen (8%) had consumed no fruit or vegetables in the previous day. There was no significant change since 2014/15.

Comparison with NHSGGC

Those in Renfrewshire were more likely to meet the target of consuming five or more portions of fruit/vegetables per day (46% Renfrewshire; 41% NHSGGC).

- Men were less likely than women to meet the target for fruit/vegetable consumption (39% male; 52% female).

- Those in the most deprived areas were less likely to meet the target of consuming five or more portions of fruit/vegetables per day (34% most deprived; 49% other areas).

Food and Drink

Respondents were asked how often they consumed nine types of food/drink. Figure 3.12 shows the proportion which consumed each type at least weekly. In total, 56% had cakes/biscuits/pastries at least once a week, and 16% did so daily. Fifteen percent consumed sugary drinks every day.

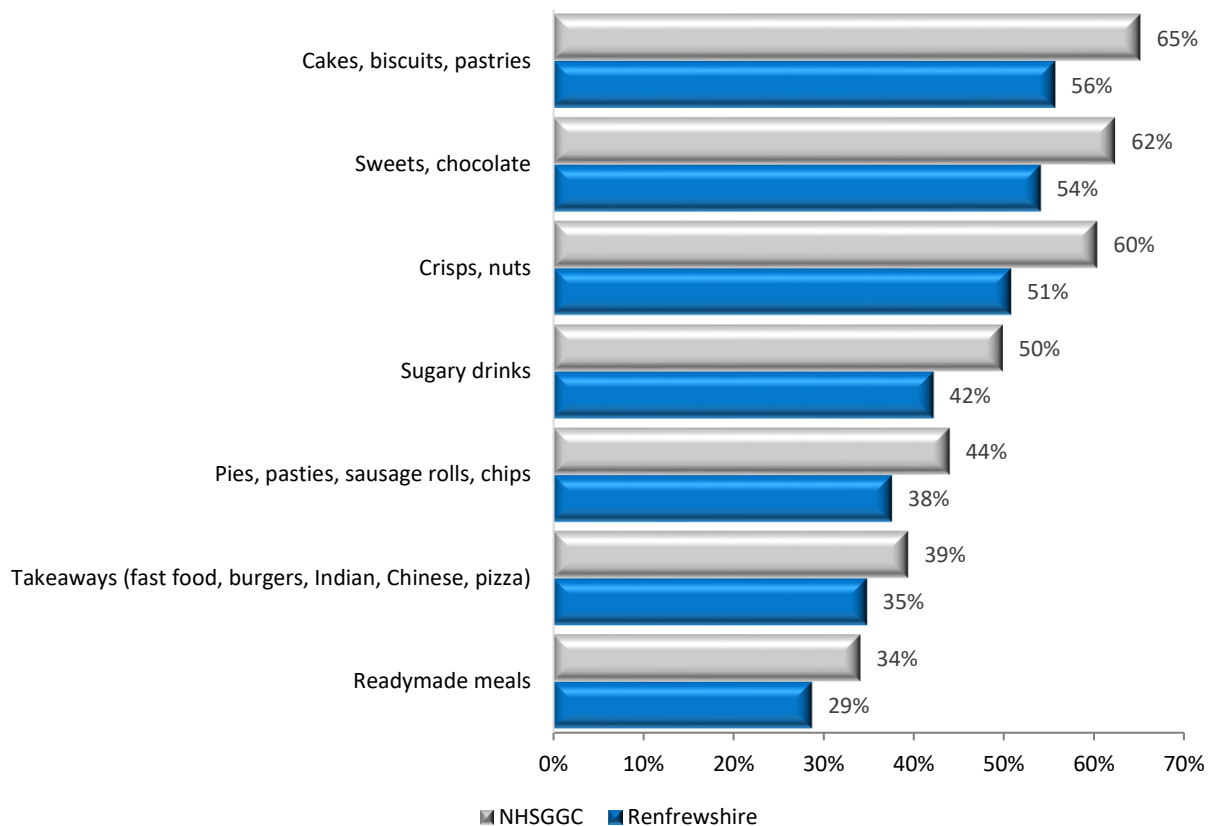

Figure 3.12: Proportion who Consumed Each Type of Food/Drink Daily or Weekly

Comparison with NHSGGC

Those in Renfrewshire were less likely to consume seven of the types of food/drink at least weekly. This is shown in Figure 3.13.

Figure 3.13: Proportion who Consumed Each Type of Food/Drink Daily or Weekly– Renfrewshire and NHSGGC (all items which showed a significant difference)

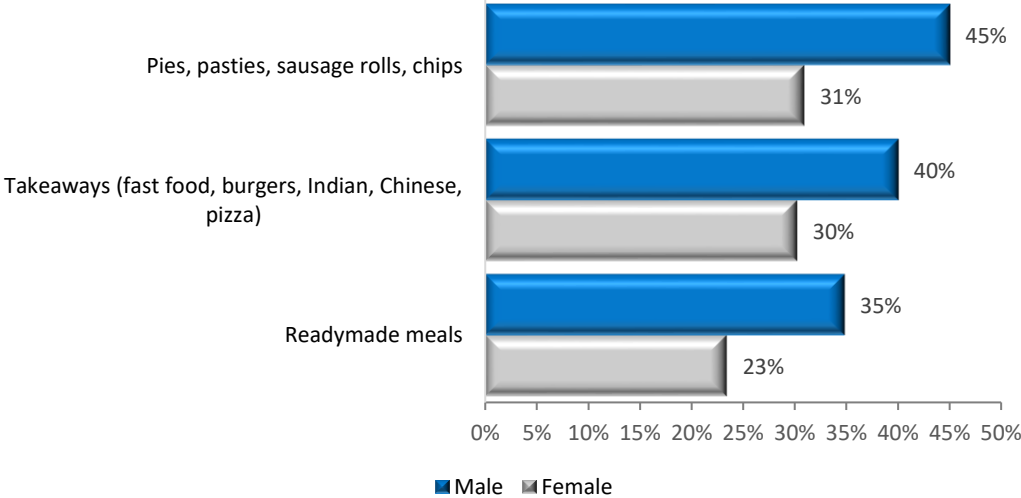

Those aged under 35 were the most likely to consume seven of the types of food and drink, as Table 3.2 shows.

Table 3.2: Proportion who Consumed Each Type of Food/Drink at Least Weekly by Age (all items which showed a significant difference)

	Cakes, biscuits, pastries	Sweets, chocolate	Crisps, nuts	Sugary drinks	Pies, pasties, sausage rolls, chips	Takeaways	Shop bought coffee, hot chocolate and speciality drinks
16-34	62%	71%	63%	66%	45%	44%	40%
35-64	53%	50%	52%	40%	35%	37%	27%
65+	57%	43%	36%	20%	34%	18%	23%
Overall	56%	54%	51%	42%	38%	35%	30%

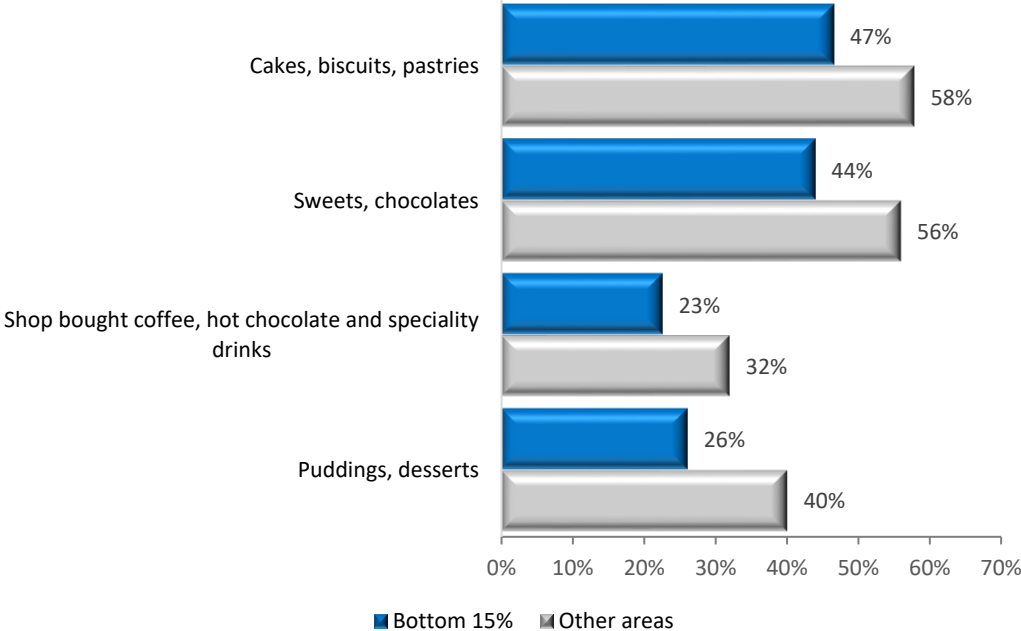

Men were more likely than women to consume takeaways, pies/pasties/chips and readymade meals.

Figure 3.14: Proportion who Consumed Each Type of Food/Drink at Least Weekly by Gender (all items which showed a significant difference)

Those in the most deprived areas were less likely to report at least weekly consumption of cakes/biscuits/pastries, sweets/chocolate, shop bought coffee or puddings/desserts.

Figure 3.15: Proportion who Consumed Each Type of Food/Drink at Least Weekly by Deprivation (all items which showed a significant difference)

Policy Context

- In 2010 the Scottish Government published *Preventing Overweight and Obesity in Scotland: A Route Map Towards Healthy Weight*. This was complemented by *The Obesity Route Map Action Plan*, which set out actions to address the increasing prevalence of obesity in Scotland.
<https://www.gov.scot/Publications/2010/02/17140721/0>
- In January 2015, the Scottish Government launched *Eat Better Feel Better* to encourage and support people to make healthier choices to the way they shop, cook and eat.
<https://www.eatbetterfeelbetter.co.uk/>
- Following a consultation from October 2017 to January 2018, the Scottish Government published its diet at healthy weight delivery plan in July 2018, 'A Healthier Future'. This recognises that eating habits are the second major cause (after smoking) of poor health in Scotland, and sets out approaches to address children's diet, ensure food environment supports healthier choices, provide access to weight management services, promote health diet and weight, and reduce diet-related health inequalities.
<https://beta.gov.scot/publications/healthier-future-scotlands-diet-healthy-weight-delivery-plan/pages/3/>
- As part of *A Healthier Future*, the Scottish Government set out a framework for Type 2 Diabetes prevention, early detection and intervention in July 2018.
<https://www.gov.scot/publications/healthier-future-framework-prevention-early-detection-early-intervention-type-2/>

3.4 Physical Activity

Respondents were asked on how many days in the last week had they taken a total of 30 minutes or more of physical activity which was enough to increase their heart rate, make them feel warmer and made them breathe a little faster. Fifteen percent said that they had not done this on any day in the last week, but one in four (26%) had done this on five or more days in the last week. The mean number of days was 3.1.

Subsequently, respondents who had been active for 30 minutes or more on one to four days were asked whether they had done this type of activity for at least a total of two and a half hours (150 minutes) over the course of the last week. Combining the responses to both questions, just under half (47%) met the target of at least 150 minutes of exercise per week (where at least one day included 30 minutes or more).

Comparison with NHSGCC

Those in Renfrewshire were less likely to meet the target of 150 minutes or more of physical activity per week (47% Renfrewshire; 58% NHSGCC).

Those aged under 35 were the most likely to meet the target for physical activity, and men were more likely than women to meet the target, as shown in Figure 3.16.

Figure 3.16: Proportion who met the Target of 150 Minutes of Exercise Per Week by Age and Gender

Questions about physical activity differed from previous surveys, so it is not possible to examine trends.

Sedentary behaviour

Respondents were asked about the average time they spent sitting, reclining or lying down (not including time asleep) per day over the previous seven days.

The mean time spent on sedentary behaviour per day was 3.9 hours.

Comparison with NHSGGC

Those in Renfrewshire had lower mean time spent on sedentary behaviour (3.9 hours Renfrewshire; 4.8 hours NHSGGC).

- Those in the youngest age group tended to spend the shortest time on sedentary behaviours.
- Men had a higher mean time for sedentary behaviour.
- Those in the most deprived areas had lower mean times spent on sedentary behaviour.

Table 3.3: Mean Number of Hours Per Day Spent on Sedentary Behaviour by Age and Deprivation

	Mean Sedentary Hours Per Day
16-34	3.7
35-64	4.0
65+	4.1
Male	4.2
Female	3.6
Bottom 15%	3.5
Other areas	4.0
Overall	3.9

Policy Context

- In 2014, the Scottish Government published *A More Active Scotland – building a legacy from the Commonwealth Games* which set out a 10-year physical activity implementation plan which aimed to get the population more physically active through initiatives to increase uptake of sport, physical activity and active travel. The plan included efforts in education, work place settings, health and social care, and facilities and infrastructure. <https://beta.gov.scot/publications/more-active-scotland-building-legacy-commonwealth-games/>
- As part of this overall plan, a National Walking Strategy was launched. <https://beta.gov.scot/publications/lets-scotland-walking-national-walking-strategy/>
- Also in 2014, a revised Cycling Action Plan for Scotland was launched, and this was subsequently revised in the 2017-2020 plan published in January 2017. <https://www.transport.gov.scot/publication/cycling-action-plan-for-scotland-2017-2020/>

3.5 Summary of Key Messages from This Chapter

Comparisons with NHSGGC

Those in Renfrewshire were:

- less likely to smoke
- less likely to drink alcohol or have an AUDIT score which indicated alcohol-related risk
- (among those who drank alcohol) less likely to binge drink or drink before a night out
- more likely feel that getting drunk was perfectly acceptable
- less likely to feel it was acceptable to drink alcohol on public transport
- more likely to meet the target of consuming five or more portions of fruit/vegetables per day
- less likely to consume seven types of food/drink weekly including cakes/biscuits, sweets/chocolate and sugary drinks
- less likely to meet the target of 150 minutes per week of physical activity
- exhibiting lower mean sedentary behaviour times.

Differences by Age and Gender

- Smoking and exposure to smoke was least common among those aged 65 and over.
- Men were more likely than women to have an AUDIT score which indicated risk. Men were also more likely to agree it was easier to enjoy a social event with a drink of alcohol and more likely to agree it was acceptable to drink on trains.
- Among those who drank alcohol, those aged under 35 were the most likely to binge drink or to drink before a night out. This age group were also the most likely to agree it was acceptable to get drunk, feel it was easier to enjoy a social event with a drink of alcohol and feel it was acceptable to drink on trains.

- Women were more likely than men to meet the target of consuming five or more portions of fruit/vegetables per day.
- Those in the youngest age group were the most likely to meet the target of 150 minutes of physical activity per week. Men were more likely than women to meet this target but men also had higher mean sedentary behaviour times.

Differences by Deprivation

Those in the most deprived areas were:

- more likely to smoke or be exposed to second hand smoke
- (among those who drank alcohol) more likely to binge drink
- less likely to meet the target of consuming five or more portions of fruit/vegetables per day
- exhibiting lower mean times for sedentary behaviour.

Trends

- There was a significant decrease between 2011 and 2017/18 in the proportion who were smokers.

4.1 Social Connectedness

Isolation from Family and Friends

One in fourteen (7%) said that they felt isolated from family and friends. There was no significant change since 2014/15.

Comparison with NHSGGC

Those in Renfrewshire were less likely to feel isolated (7% Renfrewshire; 12% NHSGGC).

Those in the most deprived areas were much more likely to feel isolated (15% most deprived; 5% other areas).

Feeling Lonely

Respondents were asked how often they had felt lonely in the past two weeks. Two percent said that had felt lonely all the time, 4% said often, 11% said some of the time, 31% said rarely and 52% said never.

Those in the most deprived areas were more likely to feel lonely at least some of the time (24% most deprived; 16% other areas).

Sense of Belonging to the Community

Respondents were asked to indicate the extent to which they agreed or disagreed with the statement "I feel I belong to this local area". In total, 88% agreed with this (22% strongly agreed and 66% agreed), while 6% neither agreed nor disagreed and 6% disagreed (5% disagreed and 1% strongly disagreed).

The proportion who agreed that they felt they belonged to the local area showed no significant change since the 2014/15 survey.

Comparison with NHSGGC

Those in Renfrewshire were more likely to feel that they belonged to the local area (88% Renfrewshire; 82% NHSGGC).

Those aged under 35 were the least likely to feel they belonged to the local area, and those aged 65 and over were the most likely. Women were more likely than men to feel they belonged to their local area.

Figure 4.1: Proportion who Agreed they Felt that they Belonged to their Local Area by Age, Gender and Deprivation

Those in the most deprived areas were less likely to feel they belonged to their local area.

- **The 2016 Scottish Household Survey** asked how strongly adults felt they belonged to their immediate neighbourhood. In total 77% of adults in Scotland felt a very or fairly strong sense of belonging to their neighbourhood. As with the findings from the NHSGGC survey in Renfrewshire, feelings of belonging increased with age.

Feeling Valued as a Member of the Community

Respondents were asked to indicate the extent to which they agreed or disagreed with the statement "I feel valued as a member of my community". In total, three in four (74%) agreed with this (13% strongly agreed and 60% agreed), while 17% neither agreed nor disagreed with this, and 9% disagreed (8% disagreed and 1% strongly disagreed). This was consistent with the findings from the 2014/15 survey.

Comparison with NHSGGC

Those in Renfrewshire were more likely to feel valued as a member of their community (74% Renfrewshire; 67% NHSGGC).

- Those aged 65 and over were the most likely to feel valued as a member of their community.
- Women were more likely than men to feel valued as members of the community.
- Those in the most deprived areas were less likely to feel valued as members of the community.

Figure 4.2: Proportion who Agreed they Felt Valued as a Member of their Community by Age, Gender and Deprivation

Influence in the Neighbourhood

Respondents were asked the extent to which they agreed or disagreed with the statement, "By working together people in my neighbourhood can influence decisions that affect my neighbourhood". Four in five (81%) agreed with this (13% strongly agreed and 68% agreed), 11% neither agreed nor disagreed and 9% disagreed (7% disagreed and 1% strongly disagreed). This was consistent with findings in 2014/15.

Comparison with NHSGGC

Those in Renfrewshire were more likely to agree that local people working together could influence decisions that affected their neighbourhood (81% Renfrewshire; 75% NHSGGC).

Those in the most deprived areas were less likely to agree that local people could influence local decisions (73% most deprived; 83% other areas).

Experience of Discrimination

In total, 2.6% said that they had been discriminated against in the last year (1.5% said this had happened occasionally and 1.2% said it had happened on several occasions).

Comparison with NHSGGC

Those in Renfrewshire were less likely to report discrimination in the last year (2.6% Renfrewshire; 4.7% NHSGGC).

- **The 2016 Scottish Household Survey** asked about experience of discrimination in the last three years, rather than the last year, so findings are not strictly comparable. However, nationally in 2016, 7% of adults said they had experienced discrimination in the last three years.

4.2 Experience of Crime

Respondents were asked whether they had been a victim of specific types of crime in the last year. Overall, 6% had been the victim of any of the five types of crime listed. The most common was anti-social behaviour.

Table 4.1: Proportion who had Been the Victim of Crime in the Last Year

	% Victim in last year
Anti-social behaviour	4.0%
Vandalism	1.1%
Any type of theft or burglary	0.9%
Physical attack	0.5%
Domestic violence	0.3%
Any of the above 5 types of crime	6.0%

Comparison with NHSGGC

Those in Renfrewshire were less likely to have been the victim of any of the five types of crime in the last year (6% Renfrewshire; 10% NHSGGC).

- Those aged 65 and over were the most likely to have been the victim of a crime in the last year.

- Women were more likely than men to have been the victim of crime.
- Those in the most deprived areas were much more likely to have been the victim of crime.

Figure 4.3: Proportion who had Been the Victim of Crime in the Last Year by Age, Gender and Deprivation

4.3 Feelings of Safety

Respondents were asked the extent to which they agreed or disagreed with the statement "I feel safe using public transport in this local area". In total, 92% agreed with this (20% strongly agreed and 72% agreed), 5% neither agreed nor disagreed and 2% disagreed (2% disagreed and 1% strongly disagreed).

Men were more likely than women to feel safe using local public transport (95% male; 90% female).

Respondents were also asked the extent to which they agreed or disagreed with the statement "I feel safe walking alone around this local area even after dark". In total, 78% agreed with this (11% strongly agreed and 67% agreed), 8% neither agreed nor disagreed and 14% disagreed (11% disagreed and 2% strongly disagreed).

- Those aged 65 and over were the least likely to feel safe walking alone in their area.

- Men were more likely than women to feel safe walking alone.
- Those in the most deprived areas were less likely to feel safe walking alone locally.

Figure 4.4: Proportion who Felt Safe Walking Alone in their Local Area Even After Dark by Age, Gender and Deprivation

Men aged under 45 were the most likely to feel safe walking alone (91%) and women aged 65 and over were the least likely (67%), as Table 4.2 shows.

Table 4.2: Proportion who Felt Safe Walking Alone in their Local Area by Age and Gender

	Feel Safe Walking Alone
Men 16-44	91%
Women 16-44	70%
Men 45-64	87%
Women 45-64	75%
Men 65+	72%
Women 65+	67%

Evidence from Other Sources

- The 2016/17 Scottish Crime and Justice Survey found that 77% of adults felt safe walking alone in their area after dark. This was very similar to the finding from the NHSGGC survey for Renfrewshire in 2017/18 (78%).
- National trends from the Scottish Crime and Justice Survey show an increase in the proportion who felt safe walking alone from 66% in 2008/09 to 77% in 2016/17. Trends show a similar rise (see below).

Trends – Feelings of Safety

Between 2014/15 and 2017/18 there was an increase in the proportion who felt safe walking alone in their area even after dark.

Figure 4.5: Trends for Feeling Safe Walking Alone Even After Dark 2008-2017/18

4.4 Social Issues in the Local Area

Using the 'faces' scale (See Section 2.1 of this report for full explanation of the scale), respondents were asked to indicate how they felt about a range of perceived social problems. Faces 5 to 7 are classified as negative perceptions and indicate that people are concerned about these issues. The problem which most frequently caused concern was the amount of drug activity – for which 21% gave a negative perception.

Figure 4.6: Proportion with Negative Perception of Each Social Issue

Comparison with NHSGGC

Those in Renfrewshire were less likely to be concerned about:

- Amount of drug activity (21% Vs 34%)
- Level of alcohol consumption (17% Vs 29%)
- Level of unemployment (13% Vs 29%)
- People being attacked or harassed because of their skin colour, ethnic origin or religion (6% Vs 10%)
- Amount of troublesome neighbours (4% Vs 7%).

Those aged 65 and over were less likely than others to have a negative perception of the level of alcohol consumption in their area (18% 16-34; 20% 35-64; 10% 65+).

Those in the most deprived areas were much more likely than those in other areas to have a negative perception of each social issue.

Figure 4.7: Proportion with Negative Perception of Each Social Issue by Deprivation

4.5 Environmental Issues in the Local Area

Again, using the 'faces' scale, respondents were asked to indicate how they felt about four perceived environmental problems in their area. The issue which most frequently caused concern was the amount of dogs' dirt.

Figure 4.8: Proportion with a Negative Perception of Each Environmental Issue

Comparison with NHSGGC

Those in Renfrewshire were less likely to have a negative perception of:

- Amount of rubbish lying about (16% Vs 21%)
- Availability of safe play spaces (14% Vs 18%)

Those in the most deprived areas were more likely to have a negative perception of:

- amount of dogs' dirt (38% most deprived; 21% other areas)
- amount of rubbish lying about (29% most deprived; 13% other areas)
- availability of safe play spaces (24% most deprived; 11% other areas)
- availability of pleasant places to walk (22% most deprived; 6% other areas).

4.6 Perceived Quality of Services in the Area

Respondents were given a list of ten local services and asked to rate each one (excellent, good, adequate, poor or very poor).

Six of the ten services showed variations in ratings by age. These are shown in Table 4.3. The other services were local schools (for which 69% gave a positive rating), nurse-led clinics (57%), public transport (58%) and childcare provision (44%).

Table 4.3: Proportion with Positive Perception of Quality of Local Services by Age

	Food shops	GP/Doctor	Out of hours medical service	Leisure/ sports facilities	Activities for young people	Police
16-34	75%	56%	51%	54%	49%	57%
35-64	67%	50%	42%	42%	31%	27%
65+	66%	61%	52%	36%	38%	32%
Overall	69%	54%	47%	44%	38%	37%

Comparison with NHSGGC

Those in Renfrewshire were less likely to have a positive perception of:

- Local schools (69% Vs 75%)
- Public transport (58% Vs 74%)
- Nurse-led clinics (57% Vs 64%)
- GP/Doctor (54% Vs 72%)
- Out of hours medical service (47% Vs 57%)
- Police (37% Vs 47%)

Those in the most deprived areas were more likely to have positive perceptions of leisure/sports facilities (53% most deprived; 42% other areas) and activities for young people (45% most deprived; 36% other areas). However, they were less likely to have a positive perception of nurse-led clinics (45% most deprived; 59% other areas).

4.7 Caring Responsibilities

One in six (16%) said that they looked after, or gave regular help or support to family members, friends, neighbours or others because of long-term physical or mental ill-health or disability, or problems relating to old age.

Figure 4.9: Proportion with Caring Responsibilities by Age

Those aged under 35 were less likely to have caring responsibilities.

A blue decorative shape with a wavy, organic border, resembling a stylized letter 'C' or a drop cap, containing the text 'Evidence from Other Sources'.

*Evidence from
Other Sources*

- The prevalence of caring in Renfrewshire is very similar to the national figure, as measured by **The Scottish Health Survey 2016**, which found that 15% of Scottish adults provided regular care for someone.

4.8 Summary of Key Messages from This Chapter

Comparisons with NHSGGC

Those in Renfrewshire were:

- less likely to feel isolated from family and friends
- more likely to feel they belonged to their local area or feel valued as a member of their community
- more likely to feel that local people could influence local decisions
- less likely to have been discriminated against or have been a victim of crime in the last year
- less likely to be concerned about social issues in their area
- less likely to be concerned about rubbish lying about or the availability of safe play spaces in their area
- less likely to have positive views about local services.

Differences by Age and Gender

- Women were more likely than men to feel they belonged to their local area or feel valued as a member of their community.
- Those aged 65 and over were the most likely to have been a victim of crime in the last year and women were more likely than men to be victims of crime.
- Those in the oldest age group and women were less likely to feel safe walking alone in their area.
- Those aged 35 and over were the most likely to be carers.

Differences by Deprivation

Those in the most deprived areas were:

- more likely to feel isolated or lonely

- less likely to feel they belonged to their local area, feel valued as a member of their community or feel that local people could influence local decisions
- more likely to have been the victim of crime in the last year
- less likely to feel safe walking alone in their area
- more likely to have a negative perception of each social and environmental issue in their local area.

Trends

- There was no significant change between 2014/15 and 2017/18 in the proportion who felt isolated, felt they belonged to their local area, felt valued as members of their community or felt that local people could influence local decisions.
- Between 2014/15 and 2017/18 there was a rise in the proportion who felt safe walking alone in their area.

5.1 Reciprocity and Trust

Respondents were asked to indicate the extent to which they agree with the following statements:

“This is a neighbourhood where neighbours look out for each other”, and
“Generally speaking, you can trust people in my local area”.

Those agreeing with the first statement were categorised as having a positive view of reciprocity, and those agreeing with the second were categorised as having a positive view of trust. Overall, 85% were positive about reciprocity and 85% were positive about trust.

There was a high degree of crossover on these two questions; 93% of those who were positive about trust were also positive about reciprocity.

Comparison with NHSGGC

Those in Renfrewshire were more likely to have a positive perception of reciprocity or trust, as shown in Figure 5.1.

Figure 5.1: Proportion with Positive Perception of Reciprocity and Trust – Renfrewshire and NHSGGC

Those aged 65 and over were more likely than younger people to be positive about both reciprocity and trust.

Figure 5.2: Proportion with a Positive Perception of Reciprocity by Age and Deprivation

Those in the most deprived areas were less likely to have positive perceptions of reciprocity or trust.

Figure 5.3: Proportion with a Positive Perception of Trust by Age and Deprivation

Trends – Reciprocity

There was no significant change between 2014/15 and 2017/18 in the proportion with a positive perception of trust. However, there was a rise in the proportion with a positive perception of reciprocity, as Figure 5.4 shows.

Figure 5.4: Trends for Positive Perception of Reciprocity - 2008 to 2017/18

5.2 Local Friendships

Respondents were asked to indicate the extent to which they agreed or disagreed with the statement: *"The friendships and associations I have with other people in my local area mean a lot to me"*. Overall, 80% agreed with this, while 13% neither agreed nor disagreed and 8% disagreed. There was no significant change since 2014/15.

5.3 Social Support

Respondents were asked to indicate the extent to which they agreed or disagreed with the statement: *"If I have a problem, there is always someone to help me"*. Those agreeing with this statement were categorised as having a positive view of social support. Responses showed that overall 88% had a

positive view of social support. This was not significantly different from the proportion in 2014/15.

Those aged 65 and over were the most likely to have a positive view of social support. Those in the most deprived areas were less likely to have a positive view as shown in Figure 5.5.

Figure 5.5: Proportion with a Positive View of Social Support by Age and Deprivation

5.4 Volunteering

One in ten (10%) said they had given up any time to help any clubs, charities, campaigns or organisations in an unpaid capacity in the last year.

Comparison with NHSGGC

Those in Renfrewshire were less likely to have volunteered in the last year (10% Renfrewshire; 18% NHSGGC).

Women were twice more likely than men to volunteer (13% female; 6% male).

Those in the most deprived areas were much less likely to volunteer (5% most deprived; 11% other areas).

*Evidence from
Other Sources*

- **The 2016 Scottish Household Survey** showed a higher national rate for volunteering, with 27% of adults in Scotland having provided unpaid help to organisations or groups in the last 12 months.

5.5 Belonging to Clubs, Associations and Groups

One in six (17%) belonged to any social clubs, associations, church groups or similar.

Comparison with NHSGGC

Those in Renfrewshire were less likely to belong to clubs, associations or groups (17% Renfrewshire; 23% NHSGCC).

- Those aged 65 and over were the most likely to belong to any of these.
- Women were more likely than men to belong to these.
- Those in the most deprived areas were much less likely to belong to these, as shown in Figure 5.6.

Figure 5.6: Proportion Belong to Social Clubs, Associations, Church Groups or Similar by Age, Gender and Deprivation

5.6 Social Activism

Respondents were asked whether, in the last 12 months, they had taken any actions in an attempt to solve a problem affecting people in their local area – e.g. contacted any media, organisation, council, councillor, MSP or MP; organised a petition. Overall, 3% had engaged in this type of social activism in the last year.

Comparison with NHSGGC

Those in Renfrewshire were less likely to have engaged in social activism in the last year (3% Renfrewshire; 6% NHSGGC).

5.7 Summary of Key Messages from This Chapter

Comparisons with NHSGGC

Those in Renfrewshire were:

- more likely to have positive views of reciprocity and trust
- less likely to volunteer or belong to clubs, associations or groups
- less likely to have engaged in social activism in the last year.

Differences by Age

- Those aged 65 and over were the most likely to have a positive view of reciprocity, trust or social support.
- Those aged 65 and over were the most likely to belong to clubs, associations or groups.
- Women were more likely than men to volunteer or belong to clubs, associations or groups.

Differences by Deprivation

Those in the most deprived areas were:

- less likely to have positive views of reciprocity or trust
- less likely to have a positive view of social support
- less likely to volunteer or belong to clubs, associations or groups.

Trends

- There was an increase between 2014/15 and 2017/18 in the proportion who had a positive perception of reciprocity in their area.
- There was no significant change between 2014/15 and 2017/8 in the proportion who had a positive view of trust or social support or the proportion who valued local friendships.

FINANCIAL WELLBEING

STATE BENEFITS

ADEQUACY OF INCOME

DIFFICULTY FINDING UNEXPECTED SUMS

DIFFICULTY MEETING NECESSARY EXPENSES

FOOD INSECURITY

6.1 Income from State Benefits

One in six (17%) said that at least some of their household income came from state benefits, and 8% said that all their household income came from state benefits.

Figure 6.1: Proportion of Household Income from State Benefits

Comparison with NHSGGC

Those in Renfrewshire were less likely to receive all household income from state benefits (8% Renfrewshire; 14% NHSGGC).

Those in the most deprived areas were much more likely to receive all income from benefits (20% most deprived; 4% other areas).

Trends – All Income From Benefits

Between 2014/15 and 2017/18 there was a decrease in the proportion who received all household income from benefits, returning the proportion to that observed in 2011. This is shown in Figure 6.2.

Figure 6.2: Proportion who Received All Household Income from State Benefits – 2008 to 2017/18

Those who received any of their household income from benefits were asked whether they had experienced benefits sanctions or delays in benefits payments in the last year.

- Five percent of those who received benefits had experienced benefit sanctions.
- Six percent had experienced delays in benefits payments in the last year.

All respondents were asked whether their household had been affected by benefit changes in the last 12 months (e.g. Working Tax Credits, DLA to PIP, benefit cap). Overall, 1% said they had been affected by benefit changes.

Comparison with NHSGGC

Those in Renfrewshire were less likely to have been affected by benefit changes (1% Renfrewshire; 4% NHSGGC).

Those in the most deprived areas were more likely to have been affected by benefit changes (4% most deprived; 2% other areas).

- The Welfare Reform Act 2012 heralded the biggest change to Social Security in the United Kingdom since the system was established. The Health and Wellbeing Survey asked questions about the impact of these changes however these were asked during the earlier stages of the implementation and responses may not fully reflect the impact of the changes. Future surveys are likely to show additional impact as the roll out of Universal Credit during 2018/19 is completed.
<http://www.legislation.gov.uk/ukpga/2012/5/contents/enacted>

6.2 Adequacy of Income

Using the 'faces' scale (see Section 2.1), respondents were asked how they felt about the adequacy of their household income. In total, 84% gave a positive view, 9% gave a neutral view and 7% gave a negative view.

Comparison with NHSGGC

Those in Renfrewshire were more likely to have a positive view of the adequacy of their household income (84% Renfrewshire; 75% NHSGGC).

Those in the most deprived areas were less likely to have a positive perception of the adequacy of their household income (70% most deprived; 88% other areas).

Trends – Adequacy of Household Income

Between 2014/15 and 2017/18 there was an increase in the proportion who were positive about the adequacy of their household income. This is shown in Figure 6.3.

Figure 6.3: Proportion with Positive Perception of the Adequacy of Household Income – 2008 to 2017/18

6.3 Views on Poverty

Respondents were asked what they felt was the main reason some people in their area lived in poverty. The most frequent response was lack of jobs (37%). More than one in three (35%) said that there was no one living in poverty in their area. All responses are shown in Table 6.1, together with the differing profile of responses for those living in the most deprived areas compared to those in other areas.

Those living in the most deprived areas were:

- less likely to say there was no-one living in poverty in their area
- more likely to say that poverty was due to laziness/lack of willpower.

Table 6.1: Perceived Reasons for Poverty in Local Area by Deprivation

	Overall	Bottom 15%	Other areas
An inevitable part of modern life	7%	7%	7%
Laziness or lack of willpower	9%	18%	7%
Because they have been unlucky	4%	2%	5%
Because of injustice in society	4%	3%	4%
Lack of jobs	37%	47%	35%
There is no one living in poverty in this area	35%	20%	38%
Other	2%	2%	2%
None of the above	2%	1%	2%

6.4 Difficulty Meeting the Cost of Specific Expenses

Figure 6.4 shows the proportion of people who said they had difficulty meeting specific expenses often or occasionally.

Figure 6.4: How Often Have Difficulty Meeting the Cost of Specific Expenses

All together, 28% said that they ever had difficulty meeting the cost of rent/mortgage, fuel bills, telephone bills, council tax/insurance, food or clothes/shoes.

Those aged under 35 were the most likely to have difficulty meeting these costs.

Those in the most deprived areas were more likely to have difficulty meeting these costs.

Figure 6.5: Proportion who Had Difficulty Meeting the Cost of Rent/Mortgage, Fuel Bills, Phone Bills, Council Tax/Insurance, Food or Clothes/Shoes by Age and Deprivation

6.5 Difficulty Finding Unexpected Sums

Respondents were asked how their household would be placed if they suddenly had to find a sum of money to meet an unexpected expense such as a repair or new washing machine. One in twelve (8%) said it would be a problem to find £35, 48% said it would be a problem to find £165 and 82% said it would be a problem to find £1,600⁵.

⁵ Previous surveys since 1999 asked about the amounts of £20, £100 and £1,000. These were changed for the 2017/18 survey, adjusted using the Retail Price Index

Comparison with NHSGGC

Those in Renfrewshire were more likely to say it would be a problem to find a sum of £165 to meet an unexpected expense (48% Renfrewshire; 44% NHSGGC).

Those in the oldest age group were less likely to say they would have difficulty finding these sums. Those in the most deprived areas were more likely to have difficulty meeting any of these sums.

Table 6.2: Proportion who would Find it Difficult Meeting Unexpected Sums of £35, £165 or £1,600 by Age and Deprivation

	Problem finding £35	Problem finding £165	Problem finding £1,600
16-34	9%	57%	93%
35-64	10%	47%	82%
65+	3%	38%	68%
Bottom 15%	19%	71%	95%
Other areas	6%	43%	79%
Overall	8%	48%	82%

Respondents were asked, if they suddenly had to find a sum of money to meet an unexpected bill, where would they get the money from (with the option of giving more than one response). The most common sources were savings (55%) and friends/family (51%). All responses are shown in Figure 6.6.

Figure 6.6: Where Would Find Sum of Money to Meet Unexpected Bill

Comparison with NHSGGC

Those in Renfrewshire were less likely to say they would use:

- savings (55% Vs 60%)
- credit/store card (6% Vs 10%)
- credit at store (1% Vs 2%)

but more likely to say they would use:

- friends/family (51% Vs 45%)
- bank loan (10% Vs 6%).

Those in the most deprived areas were less likely to use savings to pay unexpected bills (44% most deprived; 57% other areas) or economise in other areas of expenditure (9% most deprived; 15% other areas).

6.6 Credit and Store Cards

Respondents were asked whether they had taken specific actions relating to credit and store cards in the last year. Responses are shown in Figure 6.7.

Figure 6.7: Actions Taken with Credit/Store Cards in Last Year

Comparison with NHSGGC

Those in Renfrewshire were less likely to have taken any of these actions with a credit or store card in the last year (8.3% Renfrewshire; 10.9% NHSGGC).

- Those aged 35-64 were the most likely to have used credit/store cards in these ways in the last year.
- Men were more likely than women to have used credit/store cards in these ways.
- Those in the most deprived areas were less likely to have used credit/store cards in these ways.

Figure 6.8: Proportion who had Taken Any of the Specified Actions Relating to Credit/Store Cards in Last Year by Age, Gender and Deprivation

6.7 Food Insecurities

Respondents were asked eight questions which comprise the Food Insecurity Experiences Scale⁶. The proportion who said 'yes' to each question is shown in Table 6.3. All together, 6% had experienced at least one event in the last year which was an indication of food insecurity, including 3% classified as severe.

⁶ See: <http://www.fao.org/in-action/voices-of-the-hungry/fies/en/>

Table 6.3: Proportion who Experienced Each Event on the Food Insecurities Experience Scale in the Last 12 Months

	Proportion who answered 'yes'
MILD FOOD INSECURITIES	
You were worried you would run out of food because of a lack of money or other resources	4.6%
You were unable to eat healthy and nutritious food because of a lack of money or other resources	4.5%
You ate only a few kinds of food because of a lack of money or other resources	5.0%
MODERATE FOOD INSECURITIES	
You had to skip a meal because there was not enough money or other resources to get food	3.0%
You ate less than you thought you should because of a lack of money or other resources	3.7%
Your household ran out of food because of a lack of money or other resources	2.8%
SEVERE FOOD INSECURITIES	
You were hungry but did not eat because there was not enough money or other resources for food	2.8%
You went without eating for a whole day because of a lack of money or other resources	1.9%
Highest category experienced:	
Mild	2.0%
Moderate	1.2%
Severe	2.8%
At least one of the above	6.0%

Comparison with NHSGGC

Those in Renfrewshire were less likely to have experienced any event on the Food Insecurities Experience Scale (6.0% Renfrewshire; 8.6% NHSGGC).

Those aged under 35 were the most likely to have experienced at least one of the events on the Food Insecurities Experience Scale, and those aged 65 and over were the least likely.

Those in the most deprived areas were more likely to report at least one experience which indicated food insecurity.

Figure 6.9: Proportion who Experienced Any Event on the Food Insecurities Experience Scale in the Last 12 Months by Age and Deprivation

6.8 Gambling

Respondents were asked whether they had spent money on different types of gambling activities in the last month. Overall, 20% had spent money on gambling in the last month. By far the most common type was lottery/scratchcards (18%). The next most common was bookmakers (2%).

Comparison with NHSGGC

Those in Renfrewshire were less likely to have spent money on gambling in the last year (20% Renfrewshire; 28% NHSGGC).

Those aged 35-64 were the most likely to gamble and men were more likely than women to spend money on gambling.

Figure 6.10: Proportion who Spent Money on Gambling Activities in the Previous Month by Age and Gender

The age/gender group most likely to gamble was men aged 45-64 (35%) and women aged 16-44 were the least likely (11%).

Table 6.4: Proportion who Spent Money on Gambling Activities in Pervious Month by Age and Gender

	Gambled in last month
Men 16-44	18%
Women 16-44	11%
Men 45-64	35%
Women 45-64	25%
Men 65+	18%
Women 65+	17%

6.9 Summary of Key Messages from This Chapter

Comparisons with NHSGGC

Those in Renfrewshire were:

- less likely to receive all household income from benefits
- less likely to have been affected by benefits changes
- more likely to have a positive view of the adequacy of their income
- more likely to say they would have a problem meeting an unexpected expense of £165
- less likely to have used a credit/store card in specific ways in the last year
- less likely to have had experiences indicating food insecurity in the last year
- less likely to have gambled in the last year.

Differences by Age and Gender

- Those aged under 35 were the most likely to report difficulties meeting essential bills/costs and the most likely to report experiences which indicated food insecurity.
- Those in the oldest age groups were the least likely to have difficulty finding unexpected sums of money.
- Those aged 35-64 were the most likely to have used credit/store cards in specific ways in the last year.
- Gambling was most common among those aged 35-64 and men were more likely than women to report spending money on gambling.

Differences by Deprivation

Those in the most deprived areas were:

- more likely to receive all household income from state benefits and more likely to have been affected by benefits changes
- less likely to have a positive view of the adequacy of their income

- more likely to attribute local poverty to laziness/lack of willpower, and less likely than others to say that no one lived in poverty in their area
- more likely to report having difficulties meeting the cost of expenses and more likely to report experiences indicating food insecurity
- less likely to have used store/credit cards in specific ways in the last year.

Trends

- There was a decrease between 2014/15 and 2017/18 in the proportion who received all household income from benefits.
- Between 2014/15 and 2017/18 there was an increase in the proportion who had a positive view of the adequacy of their household income.

7.1 Household Composition

Household Size

Fifteen percent lived alone. Figure 7.1 shows the breakdown of household size.

Figure 7.1: Household Size

The likelihood of living alone increased with age from 5% of those aged under 35 to 32% of those aged 65 and over. Those in the most deprived areas were more likely to live alone.

Figure 7.2: Proportion who Live Alone by Age and Deprivation

Among those aged 65 and over, women were much more likely than men to live alone (40% female; 22% male).

Table 7.1: Proportion who Live Alone by Age and Deprivation

	Live alone
Men 16-44	7%
Women 16-44	5%
Men 45-64	18%
Women 45-64	11%
Men 65+	22%
Women 65+	40%

Children in the Household

More than one in four (27%) adults lived in a home with at least one child under the age of 16.

Figure 7.3: Proportion with a Child Aged Under 16 in their Household by Age

Among those aged 16-44, women were more likely than men to live in a household with a child.

Table 7.2: Proportion with a Child Aged Under 16 in their Household by Age and Gender

	Child in household
Men 16-44	38%
Women 16-44	57%
Men 45-64	26%
Women 45-64	14%
Men 65+	3%
Women 65+	1%

7.2 Sexual Orientation

Most (>99%) described themselves as heterosexual or straight, while less than 1% described themselves as gay or lesbian, bisexual or other.

7.3 Ethnicity

Respondents were asked their ethnicity. Most (94%) described their ethnicity as White (90% said White Scottish), while 6% were from non-white BME groups.

Table 7.3: Ethnicity

Ethnicity	%
White:	
Scottish	89.7%
Other British	2.0%
Polish	1.7%
Other White	<0.5%
Total White	94.0%
Asian	2.3%
Mixed or any other ethnic group	3.7%
Total BME (Non white)	6.0%

7.4 Educational Qualifications

One in five (21%) said they had no qualifications.

Comparison with NHSGGC

Those in Renfrewshire were more likely to say they had no qualifications (21% Renfrewshire; 18% NHSGGC).

Figure 7.4: Proportion with No Qualifications by Age, Gender and Deprivation

- Those in the oldest age group were the most likely to say they had no qualifications
- Women were more likely than men to say they had no qualifications
- Those in the most deprived areas were much more likely to have no qualifications

Evidence from Other Sources

- **The 2016 Scottish Household Survey** found a lower proportion nationally for those without educational qualifications - 17% of adults in Scotland had no qualifications, and those aged 75 or over were the most likely to have no qualifications (47%).

Trends – Qualifications

There was an increase between 2014/15 and 2017/18 in the proportion who had no qualifications.

Figure 7.5: Trends for Having No Qualifications – 2008 to 2017/18

7.5 Tenure

Two in three (65%) adults lived in owner-occupied homes (either owned outright or buying with a mortgage), 24% lived in homes rented from the council or a housing association, 9% lived in privately rented homes and 2% lived in homes with some other tenure.

Figure 7.6: Tenure

Comparison with NHSGGC

Those in Renfrewshire were:

- more likely to live in owner-occupied homes (65% Vs 53%)
- less likely to live in socially rented homes (24% Vs 31%)
- less likely to live in privately rented homes (9% Vs 14%).

Those aged under 35 were the least likely to live in owner-occupied homes.

Those in the most deprived areas were much less likely to live in owner-occupied homes and much more likely to live in socially rented homes.

Table 7.4: Tenure by Age and Deprivation

	Owner-occupier	Social renting	Private renting	Other
16-34	49%	26%	20%	6%
35-64	70%	23%	7%	<1%
65+	73%	23%	2%	2%
Bottom 15%	24%	61%	14%	1%
Other areas	75%	14%	8%	2%

7.6 Economic Activity

Respondents were asked which category best described their employment situation, with the option of selecting more than one category. Responses, from most to least frequent were:

- Employee in full-time job (36%)
- Wholly retired from work (27%)
- Employee in part-time job (15%)
- Full-time education (6%)
- Looking after the family/home (5%)
- Permanently sick/disabled (5%)
- Unemployed and available for work (4%)
- Self-employed – full or part time (4%)
- Employed on a zero hours contract (1%)
- Part-time education (1%)
- Government supported training or employment (<1%)
- Other (<1%).

In total, just over half (55%) were economically active (in full-time or part-time employment, self employed or on a zero hours contract).

Nearly three in four (73%) of those aged 35-64 were economically active.

Figure 7.7: Proportion Economically Active by Age

7.7 Summary of Key Messages from This Chapter

Comparison with NHSGGC

Those in Renfrewshire were:

- more likely to say they had no qualifications
- more likely to live in owner occupied homes and less likely to live in socially or privately rented homes.

Differences by Age and Gender

- Those in the oldest age group were the most likely to live alone.
- Those in the oldest age group were the most likely to say they had no qualifications, and women were more likely than men to say they had no qualifications.
- Those aged under 35 were the least likely to live in owner-occupied homes.

Differences by Deprivation

Those in the most deprived areas were:

- more likely to live alone
- more likely to say they had no qualifications
- less likely to live in owner occupied homes.

APPENDIX A: SURVEY METHODOLOGY & RESPONSE

This Appendix has been prepared by BMG Research, who conducted the survey fieldwork.

Introduction

This technical report provides details of the methodology employed by BMG Research in the collection of the HWB 2017 data. A number of key response statistics will also be presented, such as response rates, quality checking outputs, interviewer metrics, and wave by wave interviewing numbers obtained.

All processes from sampling through to data collection and delivery were managed in-house at BMG Research.

Sampling

Introduction

All sampling was managed in-house at BMG Research, and the process that was adopted closely matched that used in previous years to ensure reliable comparisons could be made over time.

The overarching objective was to obtain a sample that is representative of each of the HSCP areas, particularly in terms of age, gender, economic status and deprivation. The targets per HSCP were also split into categories depending on the nature of the area and the type of boost it was defined as: including main sample, basic boost, neighbourhood boost and enhanced boost. The target grid is shown in Table A1, with an overall target of 7,758 interviews to achieve.

Table A1: Target number of interviews to achieve per HSCP

HSCP	Boosts Required Sample (+/- 4% MOE)							Total Sample
	SAPE 2015	Main Sample *		Basic Boost	N'Hood Boost	Enhanced Boost		
	16 plus	15%	Others	All	All	MD **	Others	
NE Glasgow	151398	207	172	218				598
<i>Parkhead/Dalmarnock</i>	7213				537			537
<i>Garthamlock/Ruchazie</i>	6461				534			534
NW Glasgow	174248	141	296	162				599
<i>Ruchill & Possilpark</i>	8930				541			541
South Glasgow	183162	172	288	140				599
<i>Greater Gorbals</i>	7718				538			538
<i>Govanhill</i>	542				542			542
East Dunbartonshire	88416	3	218			522	378	1122

Renfrewshire	144729	71	292	235				598
Inverclyde	66534	57	110			528	483	1178
West Dunbartonshire	73881	49	136					185
NHSGGC Total *	956927	709	1691	755	2692	1050	861	7758
* Total NHSGGC sample = +/- 2% ** MD = most deprived 15% (20% in East Dunbartonshire)								

Sampling process

NHSGGC provided BMG Research with a datazone definition file that identified the key criteria of each datazone within the study area, including SIMD 2016, HSCP, neighbourhood etc. Datazones formed the sampling points within each area, with their selection based on a stratification by SIMD within each of the target areas to ensure a representative datazone selection by deprivation. The postcode address file (PAF) was then used to randomly select 25 addresses per datazone to form the sampling frame, with a target of 10 interviews to achieve per datazone.

It was found that during this process, a number of target areas (for example, all the neighbourhood boosts and the Inverclyde and East Dunbartonshire enhanced boosts) did not have sufficient datazones to achieve the target using the principle of '25 addresses sampled to achieve 10 interviews'. In these instances, a greater number of addresses were sampled within each datazone to achieve the sample, but at all times

only 2.5 times the number of addresses were supplied to achieve the target, thus ensuring the response rates were protected and consistent. Therefore, in summary:

- 489 datazones were sampled in total.
- 19,441 addresses were sampled in total across these datazones.
- Each address received a pre-survey letter in the post prior to being approached for interview, which gave the household the opportunity to 'opt out', and responding households were left with an information leaflet on completion of the interview.
- The next birthday rule was utilised to ensure the random selection of respondent per household.
- The datazones were allocated to one of three 'survey waves' which ensured a broad spread of interviews. The resulting number of achieved interviews per HSCP per wave is shown in the table below. No interviewing was undertaken over Christmas and in total 1,892 interviews were undertaken during 2018.

Table A2: Number of interviews achieved per HSCP per wave

HSCP	Wave 1 (August and September)	Wave 2 (October and November)	Wave 3 (December and January)	Total
East Dunbartonshire	200	582	352	1134
East Renfrewshire	4	32	158	194
Glasgow North East	235	760	678	1673
Glasgow North West	155	466	525	1146
Glasgow South	122	265	1314	1701
Inverclyde	6	731	459	1196
Renfrewshire	169	160	271	600
West Dunbartonshire	0	72	118	190
Total	891	3068	3875	7834

Fieldwork

Prior to fieldwork commencing, a pilot was conducted to test a number of aspects of the methodology, including sampling, questionnaire content/flow, CAPI script functionality, and contact management in terms of recording call outcomes at addresses. A total of 50 interviews were conducted as part of the pilot, with achieved interviews split proportionately according to the following:

- Glasgow City / East Dunbartonshire & East Renfrewshire / Renfrewshire, Inverclyde & West Dunbartonshire.
- Index of multiple deprivation.
- Age (16-44, 45-64, 65+).
- Gender.

The pilot interviews were split as follows:

Table A3: Number and profile of the pilot interviews

		Glasgow City	East Dunbartonshire/East Renfrewshire	Renfrewshire/Inverclyde/West Dunbartonshire	Total
16-44	15% SIMD	6		2	8

	Other	7	6	5	18
Total		29	11	10	50

A total of 44 interviewers were briefed and worked on this project. The initial briefing session took place in late July, with representatives from NHSGGC in attendance. A further 3 briefing sessions took place subsequent to this with interviewers who were unable to attend the initial briefing. The average number of interviews conducted per interviewer was 178. The interviews lasted an average of 24 minutes, with the maximum length of 1hr 59mins.

All interviewers were briefed that each address must be attempted up to six times before it is deemed exhausted. However, to effectively manage this, interviewers were briefed to make two attempts at an address at a weekend, two on a weekday after 4pm and two on a weekday before 4pm. This ensures the greatest opportunity for all resident groups to be captured, particularly those in work. The following table provides the breakdown of interviews achieved by time of day and weekday or weekend, and it can be seen that more than half of the interviews were completed at weekends or evenings.

Table A4: Number of achieved interviews by time of day and week

		%
Weekday before 12	767	10%
Weekday 12-4	2922	37%
Weekday after 4	2071	26%
Weekend	2074	27%

Call outcomes and response rates

The following table provides a breakdown of the call outcomes and the resulting response rates by HSCP as well as at a total level. The response rate can be calculated as the number of interviews achieved from valid addresses issued (minus addresses found to be empty, businesses, derelict, or unable to locate), which is 49%, or as an adjusted response rate based on the number of achieved interviews where contact was actually made with the household, which is 78%.

Table A5: Call outcomes and response rates

Quality checking overview

In total, 1013 of the 7834 cases were back checked. The back checking procedure involves, predominantly, telephoning respondents to check the validity and conduct of the interview. The following types of information are checked with respondents:

- Name and address.
- Conduct of the interviewer (politeness, showed ID badge, whether the interviewer tried to influence the answers).
- Other details concerning the interview (were showcards used, was the interview conducted in home or at the doorstep, was a leaflet left behind).
- Four pieces of information provided by the respondent during the interview are re-checked for consistency. These were household tenure, whether they have caring responsibilities, whether they have any long-term conditions or illness that interferes with day to day activities and whether they have helped any clubs, charities, campaigns or organisations in an unpaid capacity.

APPENDIX B: SAMPLE PROFILE

Sample Profile

The 600 completed interviews were weighted to account for under/over representation of groups within the sample to ensure the sample was as representative as possible of the known population in the Renfrewshire area. A full explanation of the weighting method used can be found in Appendix C. The breakdown of the final weighted dataset – and how this compared with the known population profile – is shown in Tables B1-B2.

Table B1: Age and Gender Breakdown

Base: 587

Gender and Age	% of sample	Renfrewshire % of population (aged 16+)
Male 16-24	6.5%	6.6%
Female 16-24	6.5%	6.4%
Male 25-34	7.5%	7.6%
Female 25-34	7.5%	7.6%
Male 35-44	6.8%	6.8%
Female 35-44	7.5%	7.6%
Male 45-54	8.9%	9.0%
Female 45-54	10.2%	10.0%
Male 55-64	7.8%	7.8%
Female 55-64	8.3%	8.3%
Male 65-74	5.8%	5.8%
Female 65-74	6.8%	6.6%
Male 75+	4.0%	4.0%
Female 75+	6.0%	4.0%

The Scottish Index of Multiple Deprivation (SIMD) 2016 is a relative measure of deprivation used to identify the most deprived areas in Scotland. It is constructed using 38 indicators within 7 'domains' (Income, Employment, Health, Education, Skills & Training, Geographic Access, Housing and Crime) each of which describes a specific aspect of deprivation. The SIMD is a weighted combination of these domains.

The SIMD is based on small geographical areas called datazones. The average population of a datazone in NHSGGC is 820 (c.350 households) and unlike previous deprivation measures, which were based on much larger geographies (e.g. postcode sectors, average population 5,000), they enable the identification of small pockets of deprivation. In order to compare the most deprived small areas with other cut-off points, the most deprived 15%

datazones are used. There are 6,976 datazones in Scotland. They are ranked from 1 (most deprived) to 6,976 (least deprived). The NHSGGC area contains the most deprived datazone in Scotland (Paisley Ferguslie) and in total 43% of the most deprived 15% datazones in Scotland lie within it.

Table B2: Most Deprived 15% Datazones Versus Other Datazones

Base: All Renfrewshire (600)

Group	% of sample	Renfrewshire % of population (Aged 16+)
Most deprived 15% datazones	19.8%	19.6%
Other datazones	80.2%	80.4%

APPENDIX C: DATA WEIGHTING

Introduction

Data were weighted to ensure that they were as representative as possible of the adult population in the NHSGGC area. This appendix describes the weighting processes.

Household Size Weighting

In this survey, households were selected at random and therefore had equal probability of selection. However within the household the probability of an individual's selection is not necessarily equal to that of others, since it is inversely proportional to the number of people available to be selected. For example, in a single-person household the probability of selection is exactly 1 whereas in a four-person household the probability of selection is 1/4. The logic of this implies that the respondent from the single-person household represents one person (him/herself) while the respondent from the four-person household is in fact representing four people. It is normal to allow for this bias by 'weighting' the sample to give the respondent from the four-person household four times the 'weight' of the respondent from the one-person household. It is usual to calculate this weighting in such a way that the sum of the weights matches the sample size.

The formula for calculating the household size weight was:

$$Wf = F \times \frac{T}{A}$$

Where:

- Wf* is the household size weighting factor for a respondent living in a household size *F*.
- F* is the household size
- T* is the total number of respondents
- A* is the total number of adults in all households where a successful interview took place.

Weighting by Age/Gender/Bottom 15%/HSCP or Neighbourhood

Firstly the household size weighting was applied to the dataset. This produced the new 'actual' counts to which we applied the age/sex/bottom15%⁷/HSCP or Neighbourhood weighting frame to produce the final weighting factors. This ensured that the weighted data would reflect the overall Greater Glasgow and Clyde population in terms of age, gender, bottom 15%/other areas and

⁷ Bottom 20% in the case of East Dunbartonshire

HSCP areas (or neighbourhoods in the case of Glasgow City). The formula for this stage of the weighting process was:

$$W_i = \frac{c_i}{C} \times \frac{T}{t_i}$$

Where:

W_i is the individual weighting factor for a respondent in age/gender/bottom15% versus other areas/HSCP or neighbourhood group i

c_i is the known population in age/gender/bottom15% versus other areas/HSCP or neighbourhood group i

C is the total adult population in the NHS Greater Glasgow and Clyde area

T is the total number of interviews

t_i is the number of interviews (weighted by the household size weighting factor) for age/gender/bottom15% versus other areas/HSCP or neighbourhood group i

APPENDIX D: INDEPENDENT VARIABLES

The table below lists the independent variables used for the analysis in this report, showing for each the number of categories and how these categories were formed.

Independent Variable	Number of categories	Categories
Gender	2	Male; Female
Age	3	16-34; 35-64; 65+
Age/Gender	6	Male 16-44; Female 16-44; Male 45-64; Female 45-64; Male 65+; Female 65+
Deprivation	2	15% most deprived datazones (20% in East Dunbartonshire); other datazones

APPENDIX E: ALCOHOL USE DISORDERS IDENTIFICATION TEST (AUDIT) SCORING

AUDIT is a comprehensive 10 question alcohol harm screening tool. It was developed by the World Health Organisation (WHO) and modified for use in the UK and has been used in a variety of health and social care settings.

Questions	Scoring system					Your score
	0	1	2	3	4	
How often do you have a drink containing alcohol?	Never	Monthly or less	2 to 4 times per month	2 to 3 times per week	4 times or more per week	
How many units of alcohol do you drink on a typical day when you are drinking?	0 to 2	3 to 4	5 to 6	7 to 9	10 or more	
How often have you had 6 or more units if female, or 8 or more if male, on a single occasion in the last year?	Never	Less than monthly	Monthly	Weekly	Daily or almost daily	
How often during the last year have you found that you were not able to stop drinking once you had started?	Never	Less than monthly	Monthly	Weekly	Daily or almost daily	
How often during the last year have you failed to do what was normally expected from you because of your drinking?	Never	Less than monthly	Monthly	Weekly	Daily or almost daily	
How often during the last year have you needed an alcoholic drink in the morning to get yourself going after a heavy drinking session?	Never	Less than monthly	Monthly	Weekly	Daily or almost daily	
How often during the last year have you had a feeling of guilt or remorse after drinking?	Never	Less than monthly	Monthly	Weekly	Daily or almost daily	
How often during the last year have you been unable to remember what happened the night before because you had been drinking?	Never	Less than monthly	Monthly	Weekly	Daily or almost daily	
Have you or somebody else been injured as a result of your drinking?	No		Yes, but not in the last year		Yes, during the last year	
Has a relative or friend, doctor or other health worker been concerned about your drinking or suggested that you cut down?	No		Yes, but not in the last year		Yes, during the last year	

Scoring:

- 0 to 7 indicates low risk
- 8 to 15 indicates increasing risk
- 16 to 19 indicates higher risk
- 20 or more indicates possible dependence

APPENDIX F: TRENDS MEASURED

Trends were explored for the following variables:

Positive perception of general health
Positive perception of physical wellbeing
Positive perception of mental or emotional wellbeing
Feeling definitely in control of decisions affecting life
Positive perception of overall quality of life
Illness/condition affecting daily life
Receiving treatment for one or more conditions
Proportion currently smoking (on some or every day)
Proportion exposed to smoke (some or all the time)
Proportion meeting the fruit and veg consumption target
Proportion isolated from family and friends
Proportion feeling they belong to local area
Proportion feeling valued as a member of their community
Proportion feeling local people can influence decisions
Proportion feeling safe using public transport
Proportion feeling safe walking alone after dark
Proportion with no qualifications
Proportion with all income from state benefits
Proportion with a positive perception of household income
Proportion with a positive perception of reciprocity
Proportion with positive perception of trust
Proportion valuing local friendships
Proportion with a positive perception of social support

APPENDIX G: SURVEY QUESTIONNAIRE

NHS Greater Glasgow & Clyde Health and Wellbeing Survey Questionnaire 2017

Good morning \ afternoon, my name is ... and I'm from BMG Research. BMG Research is an independent research company who work to the Market Research Society (MRS) code of conduct. We are carrying out research on behalf of the NHS Greater Glasgow and Clyde. The survey is about your health including issues such as diet, exercise and the area you live in and is a follow up to a similar study conducted in 2014.

Would you be willing to take part in the survey? The questionnaire will take approximately 20 minutes [book appointment if not convenient now].

BMG Research will only use your details for the purpose of this survey, and for quality checking the interviews.

The anonymised findings from the survey may be published. The data will only be used for the purposes specified and in terms of the Data Protection Act 1998. Please note that no individual will be identified through the data and findings from the survey, unless your permission is otherwise sought.

IF RESPONDENT REQUIRES FURTHER CLARIFICATION THAT BMG RESEARCH IS A GENUINE MARKET RESEARCH COMPANY THEY CAN CALL MRS ON 0800 975 9596.

INTERVIEWER NOTE: RESPONDENT MUST BE AGED 16 OR OVER

SECTION 1: PERCEPTIONS OF HEALTH & ILLNESS

ASK ALL (S/C)

- 1 I'd like to start by asking you some questions about your health. How would you describe your health? **READ OUT AND CODE ONE ONLY** [PREVIOUS Q1]

Very good	1
Good	2
Fair	3
Bad	4
Very bad	5
Don't know	6

ASK ALL (S/C PER ROW)

- 2 Looking at the faces on the card...? **SHOWCARD 1 AND CODE ONE PER ROW** [PREVIOUS Q29]

		1	2	3	4	5	6	7	Don't Know
A	Which face best rates your overall quality of life?	1	2	3	4	5	6	7	8
B	Which face best rates your general physical well being?	1	2	3	4	5	6	7	8
C	Which face best rates your general mental or emotional well being?	1	2	3	4	5	6	7	8

ASK ALL (S/C)

- 3 Do you feel in control of decisions that affect your life, such as planning your budget, moving house or changing job? **READ OUT AND CODE ONE ONLY** [PREVIOUS Q50]

Definitely	1
To some extent	2
No	3
Don't know	4

ASK ALL (S/C)

- 4 Do you have any long-term condition or illness that substantially interferes with your day to day activities? **CODE ONE ONLY** [PREVIOUS Q2]

Yes	1
No	2
Refused	3

ASK IF Q4 = YES (1) (M/C)

- 5 Thinking of these conditions and/or illnesses, would you describe yourself as having...?
READ OUT AND CODE ALL THAT APPLY [PREVIOUS Q3]

A physical disability	1
A mental or emotional health problem	2
A long-term illness	3
Don't know	4

ASK ALL (LIST)

- 6 How many illnesses or conditions are you currently being treated for? **SHOWCARD 2**
AND RECORD NUMBER [NEW]

--	--

SECTION 2: HEALTH BEHAVIOURS

READ OUT: Now I would like to ask you some questions about your lifestyle.

ASK ALL (S/C)

- 8** How often are you in places where there is smoke from other people smoking tobacco?
READ OUT AND CODE ONE ONLY [PREVIOUS Q8]

Most of the time	1
Some of the time	2
Seldom	3
Never	4
Don't know	5

ASK ALL (M/C)

- 9** Are you exposed to other people's tobacco smoke in any of these places?
SHOWCARD 3 AND CODE ALL THAT APPLY [NEW]

At own home	1
At work	2
In other people's homes	3
In cars, vans etc	4
Outside of buildings (e.g. pubs, shops, hospitals)	5
In other public places	6
No, none of these	7
Don't know	8

ASK ALL (S/C)

- 10** Which of the following statements best describes you at present?
Please note, when answering this question please do NOT include cigarettes without tobacco or electronic cigarettes.
SHOWCARD 4 AND CODE ONE ONLY [PREVIOUS Q9]

I have never smoked tobacco	1
I have only tried smoking once or twice	2
I have given up smoking	3
I smoke some days	4
I smoke every day	5

ASK ALL (S/C)

- 11** Have you used an electronic cigarette in the last year? **READ OUT AND CODE ONE ONLY [PREVIOUS Q11]**

Yes – every day	1
Yes – some days	2
Once or twice	3
No	4
Don't know	5

<https://patient.info/doctor/alcohol-use-disorders-identification-test-audit>

Interviewer read out: Now I am going to ask you some questions about your use of alcoholic drinks during the past year.

ASK ALL (S/C)

- 12** How often do you have a drink containing alcohol? **CODE ONE ONLY [NEW]**

Never	1
Monthly or less	2
2-4 times per month (this includes once a week)	3
2-3 times per week	4
4+ times per week	5
Prefer not to say	6

ASK IF Q12 = 2 TO 5 (S/C)

- 13** How many units of alcohol do you drink on a typical day when you are drinking?
SHOWCARD 5 FOR UNITS AND CODE ONE ONLY [NEW]

0-2	1
3-4	2
5-6	3
7-9	4
10 or more	5
Prefer not to say	6

ASK IF Q12 = 2 TO 5 (S/C)

14 How often have you had 6 or more units if female, or 8 or more if male, on a single occasion in the last year? **SHOWCARD 6 AND CODE ONE ONLY [NEW]**

Never	1
Less than monthly	2
Monthly	3
Weekly	4
Daily or almost daily	5
Prefer not to say	6

ASK IF Q12 = 2 TO 5 (S/C)

15 How often during the last year have you found that you were not able to stop drinking once you had started? **SHOWCARD 6 AND CODE ONE ONLY [NEW]**

Never	1
Less than monthly	2
Monthly	3
Weekly	4
Daily or almost daily	5
Prefer not to say	6

ASK IF Q12 = 2 TO 5 (S/C)

16 How often during the last year have you failed to do what was normally expected from you because of your drinking? **SHOWCARD 6 AND CODE ONE ONLY [NEW]**

Never	1
Less than monthly	2
Monthly	3
Weekly	4
Daily or almost daily	5
Prefer not to say	6

ASK IF Q12 = 2 TO 5 (S/C)

17 How often during the last year have you needed an alcoholic drink in the morning to get yourself going after a heavy drinking session? **SHOWCARD 6 AND CODE ONE ONLY [NEW]**

Never	1
Less than monthly	2
Monthly	3
Weekly	4
Daily or almost daily	5
Prefer not to say	6

ASK IF Q12 = 2 TO 5 (S/C)

18 How often during the last year have you had a feeling of guilt or remorse after drinking? **SHOWCARD 6 AND CODE ONE ONLY [NEW]**

Never	1
Less than monthly	2
Monthly	3
Weekly	4
Daily or almost daily	5
Prefer not to say	6

ASK IF Q12 = 2 TO 5 (S/C)

19 How often during the last year have you been unable to remember what happened the night before because you had been drinking? **SHOWCARD 6 AND CODE ONE ONLY [NEW]**

Never	1
Less than monthly	2
Monthly	3
Weekly	4
Daily or almost daily	5
Prefer not to say	6

ASK IF Q12 = 2 TO 5 (S/C)

20 Have you or somebody else been injured as a result of your drinking? **READ OUT AND CODE ONE ONLY [NEW]**

No	1
Yes, but not in the last year	2
Yes, during the last year	3
Prefer not to say	4

ASK IF Q12 = 2 TO 5 (S/C)

21 Has a relative or friend, doctor or other health worker been concerned about your drinking or suggested that you cut down? **READ OUT AND CODE ONE ONLY [NEW]**

No	1
Yes, but not in the last year	2
Yes, during the last year	3
Prefer not to say	4

ASK IF Q12 = 2 TO 5 (S/C)

22 Do you ever drink alcohol (either alone or with others) before going on a night out? **CODE ONE ONLY [PREVIOUS Q16]**

Yes	1
No	2

ASK IF Q22 = 1 (M/C)

23 What are the reasons you have a drink before a night out? **READ OUT AND CODE ALL THAT APPLY [PREVIOUS Q17]**

It makes the night better	1
It makes the night cheaper	2
It provides a chance to socialise with friends and family	3
Other, please specify BACKCODE AND LIST	95
Don't know	97

ASK ALL (S/C PER ROW)

24 I'm going to read out some statements, please tell me how much you agree or disagree with each of them? **SHOWCARD 7 AND CODE ONE PER ROW [PREVIOUS Q18]**

	Strongly agree	Agree	Neither agree nor disagree	Disagree	Strongly disagree	Don't know
Getting drunk is a perfectly acceptable thing to do	1	2	3	4	5	6
It is easier to enjoy a social event if you've had a drink of alcohol	1	2	3	4	5	6
Drinking on a train is a perfectly acceptable thing to do						
a. On local services	1	2	3	4	5	6
b. On Intercity services	1	2	3	4	5	6
Drinking on a bus is a perfectly acceptable thing to do	1	2	3	4	5	6

ASK ALL (S/C)

25a Thinking about the number of places you can buy alcohol in your local area from off-licences, local grocers and supermarkets, in your opinion are there...? **READ OUT AND CODE ONE**

25b Now thinking about the number of places you can buy alcohol in your local area from pubs, bars and restaurants, in your opinion are there...?

READ OUT AND CODE ONE

	Q25a	Q25b
The right amount	1	1
Too many	2	2
Too few	3	3
Don't know	97	97

ASK ALL (LIST)

26 Now I'd like to ask you some questions about the food you eat. Yesterday, how many portions of fruit did you eat? Examples of a portion are one apple, one tomato, 3 tablespoons of canned fruit, one small glass of fruit juice.

(WRITE NUMBER IN BOX. IF LESS THAN ONE, WRITE '0'; IF DON'T KNOW CODE AS 997) [PREVIOUS Q21]

WRITE NUMBER IN THE BOX:

--	--

ASK ALL (LIST)

27 Yesterday, how many portions of vegetables or salad (not counting potatoes) did you eat? A portion of vegetables is 3 tablespoons.

(WRITE NUMBER IN BOX. IF LESS THAN ONE, WRITE '0'; IF DON'T KNOW CODE AS 997) [PREVIOUS Q22]

WRITE NUMBER IN THE BOX:

--	--

ASK ALL (S/C PER ROW)

28 How often do you eat the following? **SHOWCARD 8 AND CODE ONE PER ROW [NEW]**

	More than once a day	Once a day	At least weekly	At least monthly	A few times a year	Less than once a year	Never
Takeaways (fast food, burgers, Indian, Chinese, pizza)	1	2	3	4	5	6	7
Pies, pastries, sausage rolls, chips	1	2	3	4	5	6	7
Cakes, biscuits, pastries	1	2	3	4	5	6	7
Crisps, nuts	1	2	3	4	5	6	7
Sweets, chocolate	1	2	3	4	5	6	7
Sugary drinks (regular fizzy, energy drink, juice drinks)	1	2	3	4	5	6	7
Readymade meals	1	2	3	4	5	6	7
Shop bought coffee, hot chocolate and speciality drinks (e.g. frappuccino)	1	2	3	4	5	6	7
Puddings, desserts (including ice cream)	1	2	3	4	5	6	7

The next question is about the type of physical activity that increases your heart rate, makes you feel warmer and makes you breathe a little faster. This may include walking or cycling for recreation or to get to and from places; gardening; and exercise or sport.

ASK ALL (LIST)

29 In the past week, on how many days have you done this type of physical activity for a total of 30 minutes or more? The 30 minutes can be obtained by adding smaller bouts of not less than 10 minutes. *[PREVIOUS Q25]*

(WRITE NUMBER OF DAYS IN BOX, IF DON'T KNOW CODE AS 97)

WRITE NUMBER IN THE BOX:

ASK IF Q29 = 1 (S/C)

30a Thinking about that day, did the total time you spent doing this type of activity add up to at least two and a half hours (150 minutes)? **CODE ONE**

Yes	1
No	2

ASK IF Q29 = 2, 3 OR 4 (S/C)

30b Thinking about those 2 / 3 / 4* days, did the total time you spent doing this type of activity add up to at least two and a half hours (150 minutes)? **CODE ONE**

Yes	1
No	2

*CAPI to select correct number.

[PREVIOUS Q27 – REPLACED WITH TWO QUESTIONS]

We are interested in your sedentary behaviour, which is any time you spend sitting, reclining and lying down (please don't count the time asleep).

We will be asking you to estimate the time you spent sitting on an average (normal) day in the last seven days. We realise this will vary over the week, but try to give an estimate.

ASK ALL (LIST)

31 On an average day, in the last seven days, how long did you spend sitting, reclining or lying down? **WRITE IN BOX, IF DON'T KNOW CODE AS 97**

hours	minutes
-------	---------

SECTION 3: SOCIAL HEALTH

I'd now like to ask you some questions about yourself and your local area.

ASK ALL (S/C)

32 Do you ever feel isolated from family and friends? **CODE ONE ONLY [PREVIOUS Q33]**

Yes	1
No	2
Prefer not to say	3

ASK ALL (S/C)

33 How often have you felt lonely in the past two weeks?
SHOWCARD 9 AND CODE ONE ONLY [NEW]

All of the time	1
Often	2
Some of the time	3
Rarely	4
Never	5

ASK ALL (S/C PER ROW)

34 How much do you agree or disagree with the following statements about living in this local area? **SHOWCARD 10 AND CODE ONE FOR EACH ROW** [PREVIOUS Q32]

		Strongly Agree	Agree	Neither agree nor disagree	Disagree	Strongly Disagree	Don't know
A	I feel I belong to this local area	1	2	3	4	5	6
B	I feel valued as a member of my community	1	2	3	4	5	6
C	By working together, people in my neighbourhood can influence decisions that affect my neighbourhood	1	2	3	4	5	6

ASK ALL (S/C)

35 Have you been discriminated against in the last year? **READ OUT AND CODE ONE ONLY** [PREVIOUS Q60]

No	1
Yes, occasionally	2
Yes, on several occasions	3
Prefer not to say	4

ASK IF Q35 = YES (2 OR 3) (M/C)

36a Who discriminated against you? **SHOWCARD 11 AND CODE ALL THAT APPLY**

36b And did you challenge this behaviour? **READ OUT AND CODE ALL THAT APPLY**

SCRIPTING INSTRUCTION – ONLY SHOW CODES AT Q36b WHERE CODED AT Q36a

ASK ALL (S/C)

INTERVIEWER TO COMPLETE: Was the interview conducted in another language (other than English)? **CODE ONE ONLY [PREVIOUS Q64]**

No	1
Yes (specify language)..... LIST	2

Linking Health Records

- The National Health Service (NHS) maintains routine medical and other health records on all patients who use their services. These records include:
 - o Inpatient and outpatient visits to hospital, length of stay and waiting time.
 - o Information about specific medical conditions such as cancer, heart disease and diabetes.
 - o Details about registration with a general practitioner, and when people pass away, the date and cause of their death.
- We would like to ask for your consent to link your NHS health records with your survey answers.
- To link this information we would need to send your name, address and date of birth to NHSGGC and the Information Services Division (ISD) of NHS Scotland so they can identify your health records.
- By linking this information with the interview data the research is more useful as we can look at how people's lifestyle and circumstances can have an impact on their future and use of hospital services.
- This information will be confidential and used for statistical and research purposes only. The information will not identify you so it cannot be used by anyone treating you as a patient.
- By checking this box you are only giving permission for the linking of this information to routine administrative data and nothing else.
- You can cancel this permission at any time in the future by contacting BMG Research on 0800 358 0337. You do not need to give a reason to cancel this.

By checking this box, I give consent to BMG Research to pass my name, address and date of birth to NHSGGC and the Information Services Division of NHS Scotland: **ASK ALL – RECODE TO NO CONSENT IF DATE OF BIRTH IS NOT GIVEN AT Q57a**

Q74. May we have your permission to give NHS Greater Glasgow & Clyde or its partners your name and address so they can contact you in the future about similar research studies in relation to health and wellbeing? The partners are the Glasgow Centre for Population Health and the University of Glasgow. Should you agree, this follow-up research could take the form of a postal, telephone or face to face interview/questionnaire within the next 24 months. *[PREVIOUS Q65]*

Yes, permission given		1
No, permission not given		2

As part of BMG Research's quality control process, my employer will wish to contact some of the people I have interviewed. This is to confirm that I have undertaken the interview in an appropriate manner, and according to market research practice. Could you please provide me with your name, confirm your address and provide me with a contact telephone number. This information will not be passed on, or used for any purpose other than our quality control processes unless you provided permission. Your details will be deleted as soon as our quality controls process ends.

READ : Thank you, those are all the questions I have.

If you are concerned about whether BMG is a genuine market research agency you can call the Market Research Society on 0500 396 999 during office hours. Finally I need you to verify that you have taken part in this survey and that I have accurately recorded your comments, by signing the following statement:

IMPORTANT: TAKE CARE TO RECORD RESPONDENT NAME AND ADDRESS DETAILS ACCURATELY.

RESPONDENT'S NAME:	
ADDRESS: (Address Line 1)	
(Address Line 2)	
(Address Line 3)	
(Postal Town)	
(County)	
POSTCODE: (ESSENTIAL)	
TELEPHONE: (INCLUDING STD) (ESSENTIAL)	

REMEMBER TO HAND OUT "THANK YOU" LEAFLET
